

Getting Started

Step 1

Sign up for a FREE AddressFinder account at either <https://addressfinder.com.au> or <https://addressfinder.nz>. This will provide you with an account key (Step 3) and allow you to approve your website's domain/s for use via this account and key (Step 4).

Step 2

Log into your Magento Admin and navigate to the AddressFinder configuration menu under: **Stores > Settings > Configuration > Services > AddressFinder**

Step 3

Configure the settings

1. Uncheck the '**Use system value**' checkbox
2. Set '**Enabled**' to Yes
3. Paste your AddressFinder licence key into the field
4. Paste any address params into the 'Widget Options' area (optional, see **Widget Options** below)
5. Save Config

The screenshot shows the configuration interface for the AddressFinder widget. The settings are as follows:

- Enabled** (store view): Set to **Yes**. A red circle labeled '2' highlights this dropdown.
- Use system value**: Unchecked. A red circle labeled '1' highlights this checkbox.
- Licence Key** (store view): Set to **ADDRESSFINDER_DEMO_KEY**. A red circle labeled '3' highlights this text field.
- Default Search Country** (store view): Set to **Australia**. A checkbox for 'Use system value' is checked.
- Enable Specific Forms** (store view): A list of forms is shown, including 'Checkout Billing Address', 'Checkout Shipping Address', 'Customer Address Book', 'Order Billing Address', and 'Order Shipping Address'. A checkbox for 'Use system value' is checked.
- Debug Mode** (store view): Set to **Disable**. A checkbox for 'Use system value' is checked.
- Widget Options** (store view): Set to **{\"address_params\": {\"gnaf\": \"1\"}}**. A red circle labeled '4' highlights this text area.

A red circle labeled '5' highlights the **Save Config** button in the top right corner.

Must be in valid JSON format. For a list of options, see our Javascript widget reference for [Australia](#) or [New Zealand](#).

Step 4

Skip this step if you already added your domain when signing up for your account

Login to the AddressFinder Portal (<https://portal.addressfinder.net/portal/>) and add your domain/s to the list of domains approved on your account. Select the 'Manage Domains' button on the Dashboard page and add them one at a time.

Step 5

Once your AddressFinder licence key has been set in Magento Admin and you have added your domain in the AddressFinder Portal, the extension is ready to test.

Testing Steps:

- 1) check that either *Australia* or *New Zealand* is selected in the country field.
- 2) type the first few characters of an address in the *Street Address* field. A dropdown containing addresses that closely match what you have typed should appear below the *Street Address* field.
- 3) select an address from the dropdown and check that each part of that address populates the correct field (eg, suburb into the *Suburb* field).

Add New Address

Contact Information	Address
First Name *	Street Address *
<input type="text" value="Naiki"/>	<input type="text" value="186 Wil"/> 186 William Jones Drive, Otangarei, Whangarei 0112 186 Wilson Road, Sanson 4479 186 Williams Street, Kaiapoi 7630 186 Wilder Road, Porangahau 4291 186 Willis Street, Te Aro, Wellington 6011 186 Wilton Road, Wilton, Wellington 6012 186 Wilder Road, RD 1, Porangahau 4291 186 Wilson Road, RD 9, Palmerston North 4479 Level 2, 186 Willis Street, Te Aro, Wellington 6011 Level 3, 186 Willis Street, Te Aro, Wellington 6011 <small>powered by AddressFinder</small>
Last Name *	
<input type="text" value="Pohe"/>	
Company	
<input type="text"/>	
Phone Number *	
<input type="text"/>	
Fax	
<input type="text"/>	
<input type="button" value="Save Address"/>	

Add New Address

Contact Information	Address
First Name *	Street Address *
<input type="text" value="Naiki"/>	<input type="text" value="186 Wilson Road"/> <input type="text"/>
Last Name *	City *
<input type="text" value="Pohe"/>	<input type="text" value="Sanson"/>
Company	State/Province
<input type="text"/>	<input type="text" value="Manawatu-Wanganui Region"/>
Phone Number *	Zip/Postal Code *
<input type="text"/>	<input type="text" value="4479"/>
Fax	Country *
<input type="text"/>	<input type="text" value="New Zealand"/>
<input type="button" value="Save Address"/>	

Repeat the Testing Steps above on the following pages:

Checkout - Shipping address fields

Checkout - Billing address fields

New Account - Address fields

Edit Account - Add new address

Admin>Order - Shipping address fields (only on Magento version 2.2, 2.3 & 2.4)

Admin>Order - Billing address fields (only on Magento version 2.2, 2.3 & 2.4)

Checkout>Ship to multiple addresses (the service is not yet configured to work on this page)

Step 6 - Configuration of Widget Options (optional)

By default, the service will return Australian addresses from the GNAF address database. If this does not align perfectly with your business needs please configure the **widget options** box (part 4 of Step 3 above) with an appropriate code below.

Three common configurations are:

Australia:

- To search only Australia Post delivered addresses (including PO Box address types):
`{"address_params": {"au_paf": "1"}}`
- To search only Australia Post delivered addresses (excluding PO Box address types):
`{"address_params": {"au_paf": "1", "post_box": "0"}}`

New Zealand:

- To exclude post boxes:
`{"address_params": {"post_box": "0"}}`

For a full list of possible options visit https://addressfinder.com.au/docs/widget_docs/ or contact us if you have any different needs.

Disabling the service on specific forms

By default, the service will work in the Checkout, New Account, Edit Account and Admin Order pages (excluding Magento Version 2.1). If you do not wish the service to work on all of these forms, disable the appropriate ones via the 'Enable Specific Forms' area of the **Stores > Settings > Configuration > Services > AddressFinder** page.
