

NET 30

Installation manual

To install the extension follow the instructions below:

- 1) Backup your web directory and store database
 - Get the NET 30 name and version in your Marketplace account:
Login to Magento Marketplace with the username and password you used to purchase the NET 30 extension;
 - Enter the My Purchases section: **Your name (top-right corner of the page) > My Profile > My Purchases;**
 - Find NET 30 and click **Technical details.**
- 2) Copy the provided component name and version in order to update your composer.json file.

Note: We advise you to use the latest version of our extension.

- 3) Update your composer.json file:
 - Open the root Magento directory on your server and send Composer the following command:

```
Composer require <Component name>:<version>
```

- 4) At the Composer request, enter your Magento marketplace credentials (public key - username, private key - password).
- 5) Make sure that Composer finished the installation without errors.
- 6) Flush store cache, log out and log in the backend again.

The NET 30 extension is now installed and ready for work.

Use Magento [Dev Docs](#) for more details.

Note!

If an error occurs while installing the extension and command returns non-zero exit code:

```
`/usr/bin/php -f /var/www/html/bin/magento setup:di:compile`
```

Please follow the instruction below:

Since this error might be caused by exhausted memory size, so try to run the following commands before installing the extension:

```
php -dmemory_limit=2G bin/magento setup:upgrade  
php -dmemory_limit=2G bin/magento setup:di:compile
```
