Getting Around

Magento 2 Simple Bundle Product simplifies the creation of bundle products by minimizing the number of configuration options. Admins can add bundles to new orders without additional settings. Customers can add bundles to their cart without any preliminary customization.

Compatibility: Magento Open Source 2.3.X - 2.4.X, Magento Commerce using on-prem (EE) 2.3.X - 2.4.X, Magento Commerce on Cloud (ECE) 2.3.X - 2.4.X.

Introducing Simple Bundle Product

The **Simple Bundle Product** extension makes bundle installation for admins and their purchasing for customers as simple as possible by introducing the following features:

- Excessive bundle setting options are hidden;
- Bundles can be added to backend orders;
- Bundle customization step is eliminated.

Extension Logic

The module adds the new option to the **'New Product'** page for bundle products. Store admins can instantly switch to a simplified view with fewer settings compared to the native functionality. However, the core Magento logic remained virtually unchanged, meaning that bundles are created and handled by Magento the same way as before.

In essence, an admin needs to add bundle items in order to create a new bundle product. Once the bundle has been created, the admin can add it to new orders.

On the storefront, customers can now add already configured bundles to their cart without customizing them just like they do this with a simple product type.

Stock Calculation Logic

From a business perspective, the logic is the same as in the native Magento bundle products: a merchant can't deliver the bundle if one of the components is missing. So if at least one of the child products goes out of stock, the whole simple bundle product will go out of stock as well. Still, the backorder functionality is supported.

Backend Configuration

Extension Settings

Start with configuring the extension settings under **Stores > Configuration > AHEADWORKS EXTENSIONS > Simple Bundle Product**.

Here you are presented with one option only: **'Default Title List of Bundle Products'**. Specify the appropriate title in the field and click 'Save config' to apply the setting.

Configuring a Simple Bundle

Now, let's create a simple bundle. Traditionally, the bundle is configured in **Catalog > Products**.

First, switch to the **'Simple Bundle'** mode.

The screenshot shows the 'New Product' configuration interface. At the top right, there are buttons for 'Back', 'Add Attribute', and 'Save'. The main configuration area includes:

- Enable Product** [website]: A toggle switch is turned on, labeled 'Yes'.
- Attribute Set**: A dropdown menu is set to 'Default'.
- Switch To Simple Bundle** * [global]: A toggle switch is turned off, labeled 'No'. A red circle highlights the toggle, and a mouse cursor is pointing at it.
- Product Name** * [store view]: A text input field containing 'Yoga Bundle for Her'.
- SKU** * [global]: A text input field containing 'Yoga Bundle for Her'.

Once you've enabled the parameter, the pop-up alert is displayed.

The screenshot shows the same 'New Product' configuration interface as above, but with a confirmation dialog box overlaid in the center. The dialog box contains the text: 'Are you sure want to switch view? All bundle options will be permanently deleted!'. At the bottom of the dialog, there are two buttons: 'Cancel' and 'Continue'. The background configuration is dimmed, but the 'Switch To Simple Bundle' toggle is now turned on, labeled 'Yes'.

Nothing to worry about - just a warning that the native bundle options will now be unavailable. Click 'Continue' .

Next, scroll down to the **'Bundle Items'** section to see what changed there.

The screenshot shows the 'New Product' interface. At the top right, there are buttons for 'Back', 'Add Attribute', and 'Save'. Below this is the 'Bundle Items' section, which includes a 'Ship Bundle Items' dropdown menu set to 'Together'. A pagination indicator shows '1 of 1'. The main content area has a header 'What's in the bundle?' and a text input field with the same text. Below the input field is a button labeled 'Add Products to Option'.

As you can see, the **'Add Option'** button is now hidden. The **'Option Title'** field displays the value you previously indicated in the extension settings. So, all you need to do is to add the required items to the bundle the same way as in the native solution.

After the bundle is composed, the section will look like this:

Yoga Bundle for Her

← Back Add Attribute Save

Bundle Items

Ship Bundle Items [global] Together

< 1 of 1 >

What's in the bundle?

Option Title *

What's in the bundle?

Name	SKU	Default Quantity *
Endeavor Daytrip Backpack	24-WB06	1
Sprite Stasis Ball 55 cm	24-WG081-pink	1
Quest Lumaflex™ Band	24-UG01	1
Affirm Water Bottle	24-UG06	1
Bolo Sport Watch	24-WG01	1

Add Products to Option

In the simplified view, the **‘Input Type’** section is now hidden. It’s automatically set to **‘Checkbox’** and can't be deselected by a customer on a storefront. The **‘Required’** parameter is enabled by default.

The extension does not support custom product options added either to the parent bundle product or its children because it contradicts the whole idea of adding bundle product to Cart in a single click.

Native bundle conversion

You can easily turn native bundles into the simple ones at the backend catalog page. Select the bundles you want to convert and apply massive action to the products.

Adding Bundles to New Orders

In addition to bundle creation, the module improves the functionality of the ‘**New Order**’ page.

Let’s see it in action! Go to **Sales > Orders** and click . Select the required customer and start adding products to the order.

Now you can easily add your bundles to new orders. Notice: since the version 1.1.0 you don't have to configure them additionally - the behavior is the same as with the products of simple type.

Here you are suggested to set the quantity of the bundle product. If you leave the 'Quantity' field empty, the quantity will be '1' (default value).

Simple Bundles on the Storefront

Simple Bundle Product makes the interface of bundle product pages more user-friendly. Check it out!

The screenshot displays the LUMA storefront interface. At the top left is the LUMA logo. A search bar and a shopping cart icon are located at the top right. Below the logo is a navigation menu with categories: What's New, Women, Men, Gear, Training, Sale, and Bundles. The 'Bundles' category is currently selected. Below the navigation menu is a breadcrumb trail: Home > Bundles > Yoga Bundle for Her. The main content area features a large image of a woman in a purple t-shirt. To the right of the image, the product title 'Yoga Bundle for Her' is displayed. Below the title, there is a prompt 'Be the first to review this product'. The current price is \$91.70, and the regular price is \$131.00. The product is marked as 'IN STOCK' with an SKU of 'Yoga Bundle for Her'. A list of items included in the bundle is shown: 1 x Endeavor Daytrip Backpack, 1 x Sprite Stasis Ball 55 cm, 1 x Quest Lumaflex™ Band, 1 x Affirm Water Bottle, and 1 x Bolo Sport Watch. A quantity selector is set to 1, and a blue 'Add to Cart' button is positioned at the bottom right of the product details.

Bundle items are presented as a list with active links to corresponding item pages.

All the required configuration is already performed for customers.

They just need to add the product to a cart. That's it! Mind that if you need to use simple bundles along with the native ones, you can do it smoothly.

For an in-depth look visit Simple Bundle Products demo store at the extension's [product page](#).
