

Amasty Extension Installation Guide

for Magento 1.x

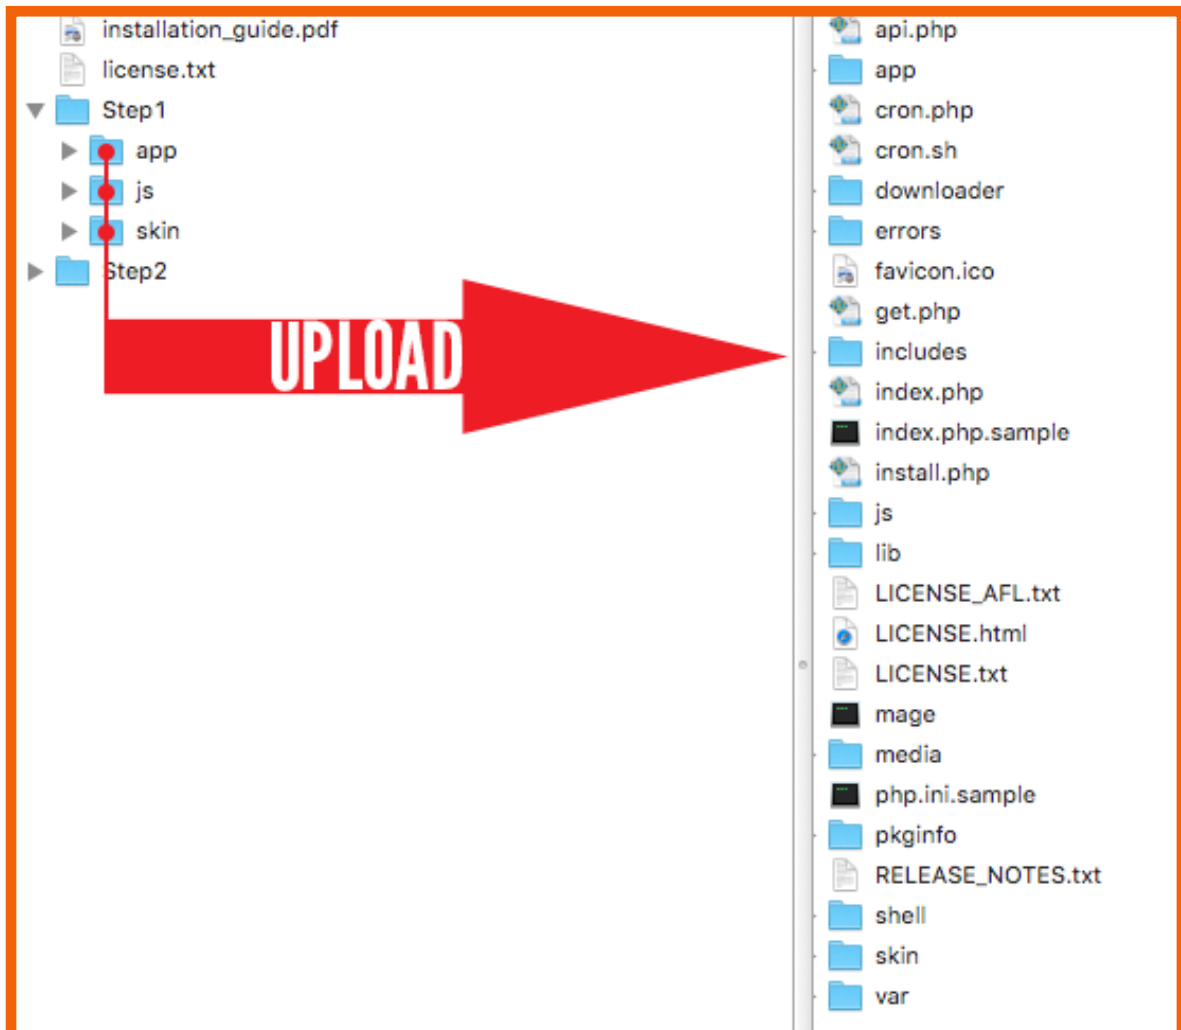

The logo for Amasty features a large, bold, orange letter 'A'. Inside the lower-left portion of the 'A', there is a stylized blue 'M' that resembles the Magento logo. To the right of the 'A', the word 'masty' is written in a lowercase, orange, sans-serif font.

1. Login into the backend, go to System — Cache Management and **enable** all types of cache.
2. Go to System — Tools — Compilation and make sure compilation is **disabled**. It should display “Compiler Status: Disabled” on that page:

3. Connect to your website source folder with FTP/SFTP/SSH and **upload all** the extension files and folders from “**Step1**” folder of the extension package to the **root folder** of your Magento installation:

Please use the “**Merge**” upload mode. Do not replace the whole folders, but merge them. This way your FTP/SFTP client will only add new files. This mode is used by default by most of FTP/SFTP clients software. For MacOS it's recommended to use Transmit. If you install several extensions from Amasty, they will contain same files from the Base package — feel free to overwrite them, these are system files used by all our extensions.

4. **Upload all** the extension files and folders from “**Step2**” folder the same way you did in the previous step.
5. Go to System — Cache Management page under Magento backend and click “Flush Cache Storage” button. After this action, **the extension is installed**.
6. If you need to enable compilation, you should go to System — Tools — Compilation and click “Run Compilation Process”.
7. Please log out of the backend and log in again, so Magento can refresh permissions.
