Installation Instructions

There are several ways you can install any Magento extension. Our extension is no different. We will show you three ways to install the extension, but you must not mix them. Choose one and stick to it.

If you do not know how to install an extension or you wish a professional to do it for you, we offer an additional installation service for a small fee.

Installation via file uploading (If you purchased the extension on our site)

If you purchased the extension on our site then unpack .zip file from /Magento2/InstallByUploadingFiles/ directory inside your Magento root.

- Run following commands on Magento root directory:

```
php bin/magento maintenance:enable
php bin/magento module:enable --clear-static-content Apptrian_Subcategories
php bin/magento setup:upgrade
php bin/magento cache:flush
php bin/magento setup:static-content:deploy
php bin/magento maintenance:disable
php bin/magento cache:flush
```

Installation via Composer (If you purchased the extension on our site)

If you purchased the extension on our site then copy .zip file from /Magento2/InstallWithComposer/ directory inside your MAGENTO_ROOT/vendor/apptrian/packages/ directory (create directory if does not exist).

- Run following commands on Magento root directory:

```
php bin/magento maintenance:enable
composer config repositories.apptrianartifacts artifact $(pwd)/vendor/apptrian/packages
composer require apptrian/subcategories
php bin/magento module:enable --clear-static-content Apptrian_Subcategories
php bin/magento setup:upgrade
php bin/magento cache:flush
php bin/magento setup:static-content:deploy
php bin/magento maintenance:disable
php bin/magento cache:flush
```

Installation via Composer (If you purchased the extension on Magento Marketplace)

If you purchased the extension on Magento Marketplace then you must use Composer. Magento Marketplace does not allow extension downloads.

- Run following commands on Magento root directory:

```
php bin/magento maintenance:enable
composer require apptrian/subcategories
php bin/magento module:enable --clear-static-content Apptrian_Subcategories
php bin/magento setup:upgrade
php bin/magento cache:flush
php bin/magento setup:static-content:deploy
php bin/magento maintenance:disable
php bin/magento cache:flush
```

Please make sure your Magento public and private keys are in your Magento root auth.json file. Usually, people install Magento with one Magento Marketplace account (public and private keys) and then purchase an extension with another Magento Marketplace account (different public and private keys). Check the Magento Marketplace account you used to purchase the extension and make sure its public and private keys are in the Magento root auth.json file. **WARNING!** if you already have keys there, be very careful because maybe some other extensions are purchased with another Magento Marketplace account.

Configuration

Our extension works out of the box. If you want to configure it differently log to your Magento Admin and go to:

Stores > Configuration > Apptrian Extensions > Subcategories Grid/List

There are more than several options for customization. They are all self-explanatory and have comments and tooltips.

After changing options make sure you refresh your Magento cache.
