**Asaas Payments integration module**

Installation
We recommend that you have a testing environment to validate changes and updates before updating your store in production. Also, make a backup with all the information before performing any update / installation procedure.

Compatible Versions:
 2.3.x
 2.4.x
Prerequisite:
Requires PHP to be at least version 7.1.X.
Installing the Asaas Module:
Download the module and follow the steps according to the way your store was installed:
Wings-Magento2
Install using Composer
Install via packagist

composer require asaas / module-magento2
At this time, you may be prompted for your Magento authentication credentials. If you have any questions, there is a description of how to proceed on this link in the official documentation.
Run the commands:

php bin / magento setup: upgrade
php bin / magento setup: static-content: deploy or php bin / magento setup: static-content: deploy pt_BR, according to your store's settings.
Install using github
If your store was created by cloning or downloading the magento project, follow these steps:
Extract the contents of the ZIP download and move it to \ Magento2 \ into the Asaas folder
Make sure your directories are in your app / code / Asaas / Magento2 store this way
Run the bin / magento setup: upgrade command
Run the bin / magento setup: di: compile command
Run the bin / magento setup: static-content: deploy -f command
Run the bin / magento cache: clean command
settings
Access the Magento Administrative Panel on the side menu click on Stores, then click on Configuration, then click on Customers, then Customer Settings, then access the Name and Address Options option. In Number of Lines in Address you must inform the number 4, as shown in the image below:
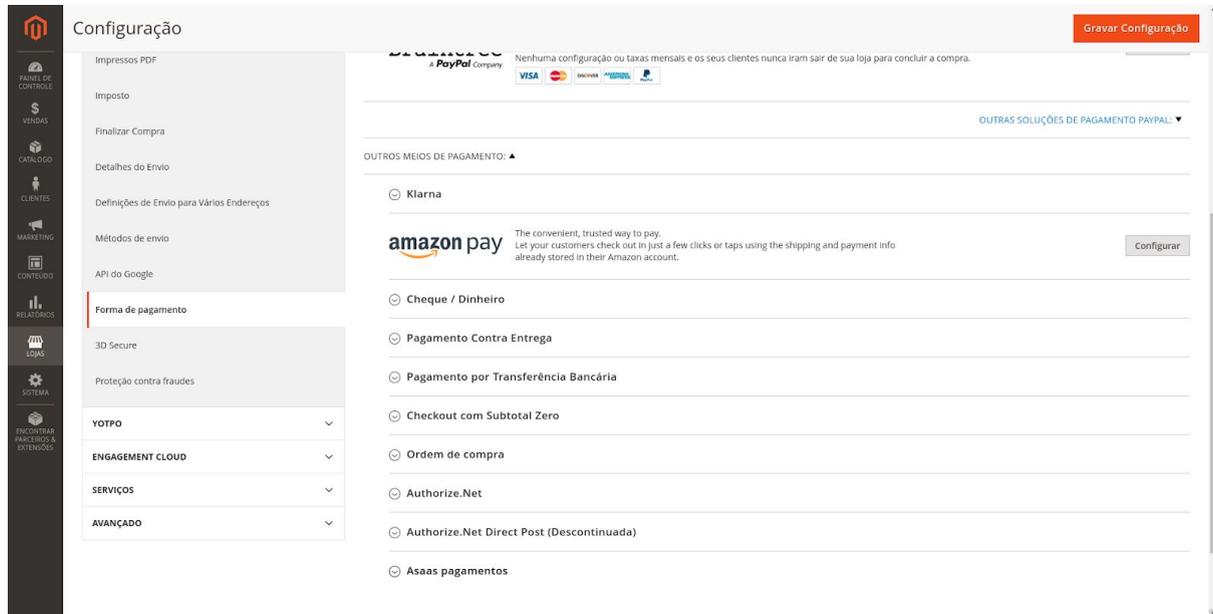

Opções de Nome e Endereço                                                                    ⌄

                  Numero de Linhas em Endereço      4                                          ☐ Utilizar o valor do sistema
                                                    Intervalo válido 1-4

After configuring the Client, access the Magento Administrative Panel. In the side menu click on Stores, then click on Configuration, in the Sales sub-menu click on Payment Methods. The screen will be loaded to configure the site's payment methods.

How to enable Asaas on your website
In the first block of information, there is the configuration to enable or disable the module completely, check Yes to continue the configuration.

Next we have the general settings, credit card settings and boleto settings

NOTE: For all of the following settings to work, all the previous step-by-step must have been followed.

General Settings
Api Key

Asaas account integration key. The production and sandbox tokens are distinct.
Environment

Select which version of the environment the site will be pointing to. The available environments are: Development and Production.
URL for billing Webhooks

URL to be informed in the billing Webhook on the Asaas website, so that when the payment is approved, the order status is changed.
Display order

Order of display of the payment methods enabled in the module being shown on the Checkout screen.
Enable notifications between Asaas and buyer

Enables messages via e-mail informing payment status changes. This option can be enabled or not.

Credit Card Settings
Able

Enables or disables the credit card payment method.
Plots

This field, in addition to bringing the maximum amount of installments allowed, also adds a percentage of interest on each installment if the customer chooses.
Credit Card Type

Selects and displays on the credit card form the flags available for payment.
