

# Beprime Seo - User Guide

Version: 1.1.0 (01/31/2018)

Beprime Seo is complex solution for the stores based on Magento® 2.2 and Magento 2.1 developed to optimize your store for the search engines and make your search ranking higher. This guide explains how to use Beprime Seo module.

## Make layered navigation URLs SEO-friendly on the category pages.

When crawling your pages, search engines analyzes URL structure as well. That is why it's important to make it SEO-friendly. So if the customer will filter products by brand on the category page, this brand will be added to the URL by the extension to give search engine more relevant information.

If you open a category and filter products by the layered filters, you will see an URL like **http://example.com/category.html?color=58**. This is technically correct, however, let us give more relevant information for the search engines by adding keywords directly into the URL.

Sign in to admin panel of your Magento 2 store, then open **Stores -> Configuration -> Services -> Beprime SEO -> SEO URL**.

### SEO URL

<b>Enable</b> [store view]	Yes	Makes URLs like "women/red.html" instead of "women.html?color=12".
<b>Allow national symbols in URL</b> [store view]	Yes	Disables transliteration.
<b>Select filters significant for SEO</b> [store view]	<ul style="list-style-type: none"><li>Manufacturer</li><li>Color</li><li>Activity</li><li>Style Bags</li><li>Material</li><li>Strap/Handle</li><li>Features</li><li>Gender</li><li>Category Gear</li><li>Size</li></ul>	

SEO URL feature will be applied for selected filters.

Set "**Enable**" to "**Yes**" and select filters which are significant for SEO in the next field. Please select only filters which options contain relevant words to add into the URL, because selecting many filters will generate too many unique URLs.

After this, e.g. URL **http://example.com/category.html?color=58** will look like **http://example.com/category/red.html**. It is especially useful for the brand filter etc.

If you have filter options with non-latin symbols, it is useful to disable transliteration and put it into URL as is. Enable "**Allow national symbols in URL**" option in this case.

## Restrict crawling by multiple filters

As you know, layered filters produce a lot of similar URLs containing filter parameters. This could increase the delay time of crawling other, more important pages in your store. So you can restrict to crawl some not necessary pages by the settings in section **Stores -> Configuration -> Services -> Beprime SEO -> Robots Tag**.

### Robots Tag

Robots tag in case products are filtered <small>[store view]</small>	<input type="text" value="*,nofollow"/>
	<small>** means that the value will be not modified.</small>
Additional Robots tag in case multiple filters applied <small>[store view]</small>	<input type="text" value="noindex,nofollow"/>
	<small>** means that the value will be not modified.</small>

Please review them. We already set optimal default values, but you can change them for your special cases.

Thank you for use Beprime Seo module. Please refer our [official website](#) to get additional info.
