Gettings Forum Code

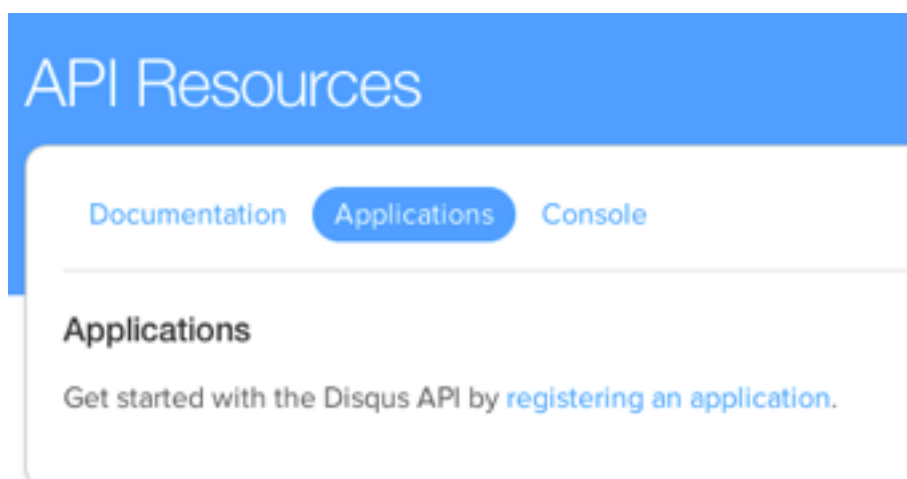

For enable DISQUS for your web-site, you need a Forum Code. For this you should go to <http://disqus.com> and register a new site. While creation process, you are creating a new forum code This key you should enter in your Magento Extension settings.

At this step extension is ready to work, and users can see comments blocks in your Shop. But, if you want to have possibility to manage comments via Magento Backend, you should add API Keys for your application

Getting API keys

Firstly, you need to register a new application

Go to API section in disqus.com webpage (search for link in footer of homepage). Then click on "Register new application"

After registration, please set Authentication settings to "Read, Write and Manage Forums"
In "Details" tab you can find API keys

Your Access Token

Use this token as the value for `access_token` to authenticate as *google-*

[Redacted]

Access Token:

[Redacted]

Permissions:

Read, Write, Manage Forums

[Reset my access token](#)

OAuth Settings

For more information on how to use OAuth, please see our [OAuth 2.0 documentation](#).

API Key:

[Redacted]

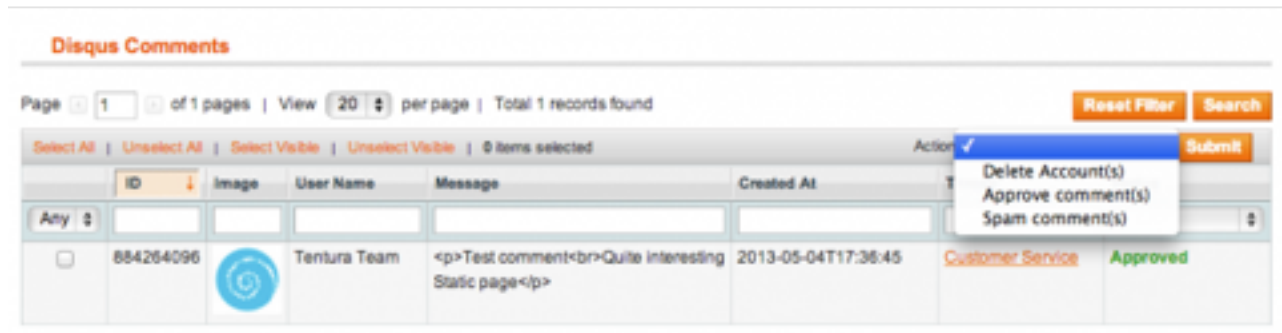

API Secret:

[Redacted]

Copy & Paste these keys in Magento Settings, and save

Manage Comments

Under Customers -> Disqus comments

You can view comments list or move comments to Spam or approve and also delete them

Magento Authorization

For enable automatically Magento customer authentication on Disqus, you have to request a free add-on for your Disqus account. https://disqus.com/support/?article=contact_SSO

And then you have to enable SSO authentication in the Settings of your API/Application: <https://disqus.com/api/applications>

Now all your Magento users can post Disqus messages without any additional authorization
