

## User Guide – Registration Blocker

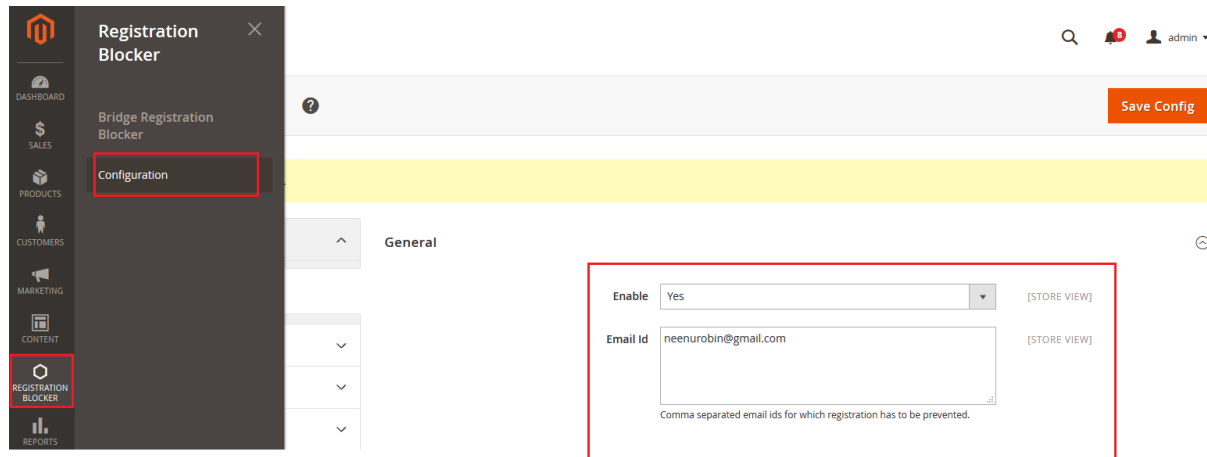

The registration blocker extension allows the administrator to prevent registration of certain email addresses with the website. The extension offers an interface to add all such blacklisted email addresses from the extension's settings page.

### 1. Extension Settings

Please go to admin panel -> Registration Blocker -> Configuration.

For block the user by this extension, first select the 'Registration Blocker' menu from left side bar in admin panel. Then click on the 'Configuration' submenu.

User can enable this extension and can add comma separated email ids for block the registration and then save.

### 2. Front end Example

Now that blocked email id's user not able to register in the site.

When we enter the blocked email id at the time of registration we will get the error message like 'You are not allowed to join with us'.
