Installation Guide

After finishing the purchasing process, you will receive the link to download this extension.

(Please turn off Merge-JS before installing the module. Only Turn on Merge-JS when finishing the installation).

Step 1:

Unzip the file

Step 2:

Create another directory called **app/code/Bss/AddMultipleProducts/**. AddMultipleProducts is the module's internal identifier. You can find it in the "composer.json" file in the extension ZIP file you downloaded, look at the node "psr-4".

This is what you call the directory, and then you put the contents of the extension ZIP file in there.

Step 3:

Upload the directory **app/code/Bss/AddMultipleProducts/** into the root directory of your Magento installation. The root directory of Magento is the directory that contains the directories "app", "bin", "lib" and more. All directories should match the existing directory structure.

Step 4:

Go to Magento 2 root directory.

Run: php bin/magentosetup:upgrade

Step 5:

Run: php bin/magentosetup:static-content:deploy

Step 6:

Clear all Cache

***Note**

In case you have followed all above steps but the extension still doesn’t work properly, you can delete the file or change the module’s filename to keep your website function as normal.
