

1. Overview

Magento 2 Product Label extension allows attaching various visibly-appealing labels such as on sale, new-in, best-seller, hot-deal label to product icon. By that way, online merchants can highlight its promotion and get customers' attention quickly.

2. How Does It Work?

Please go to **Stores** ⇒ **Configuration** ⇒ **BSS COMMERCE** ⇒ **Product Label**

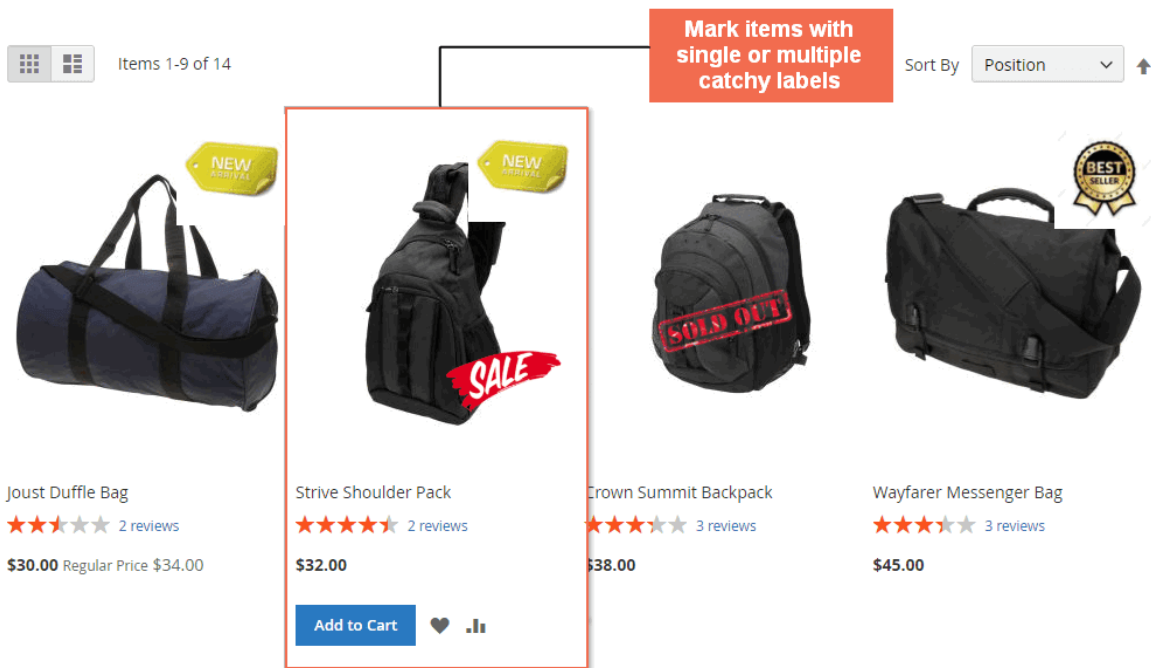

2.1 General Configuration

General Configuration

Enable Module <small>[store view]</small>	Yes
Version 1.1.5	
Display multiple labels on product <small>[store view]</small>	Yes
If product is out of stock, only show "Out of Stock" label <small>[store view]</small>	Yes
Label does not display on <small>[store view]</small>	<ul style="list-style-type: none">Home PageCatalog PageProduct PageShopping Cart PageCheckout PageSearch PageWishlist PageCompare Page
Skip to show label on all pages	

In **Enable Module**: choose *Yes* to enable the module, or *No* to disable it.

In **Display multiple labels on product**: choose *Yes* to show various labels to the thumbnail image of the product that meets the set conditions. If the admin selects *No*, the only label with the highest priority will be applied.

In Is Out-of-stock Product label:

- If the admin selects Yes, all out-of-stock products are marked with one label in which “**Apply to Out-of-stock Product**” is set to Yes.

***Note:

- In case there are various labels set to “**Apply to Out-of-stock Product,**” the label having the highest priority is used.
- Even when those stock-out products meet the conditions of other labels, only “Out of stock” label will be shown.
- If the admin selects No, out-of-stock products can be marked with various labels.

In Label does not display on:

- Choose any page on which the display of product labels is excluded. Multiple-selection is allowed by holding Ctrl and clicking.
- Skip this field to show labels on all pages: Home Page, Catalog Page, Product Page, Shopping Cart Page, etc.

Display Configuration

Product Page Label Container [store view]
Magento default: '.fotorama__stage'. Change selector of Container Image Product according to theme/site.

Product List Label Container [store view]
Magento default: '.product-image-container'. Change selector of Container Image Product according to theme/site.

In Display Configuration:

- **Product Page Label Container:** currently the default Magento, change accordingly to your website theme.
- **Product List Label Container:** currently the default Magento, change accordingly to your website theme.

2.2 Product Label Grid

All created product labels are recorded in the grid for further management. Please follow **Marketings ⇒ BSSCommerce ⇒ Product Label ⇒ Manage Label**.

Product Label

Product Label grid includes label image, label name, label status, priority, display duration, etc.

In *Action* column, choose *Edit* to modify the product label thumbnail, re-schedule the label display, or change label condition.

The admin can choose multiple labels and take mass action to delete those selected labels.

2.3 Product Label Creation

In **Product Label** grid, please click on **Add New Label** to create a new product label.

General

Name +

Enable

Image No file chosen Delete Image

Resize label and move to choose its position on product image as desired

Priority +

Is Out-of-stock Product Label?

In **Name**: enter the name of the product label.

In **Enable**: choose *Yes* to enable product label, or *No* to disable it.

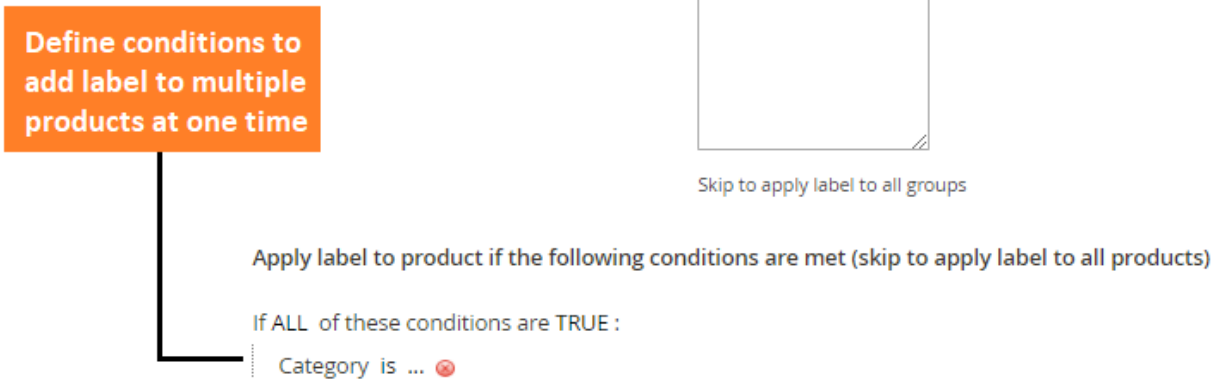

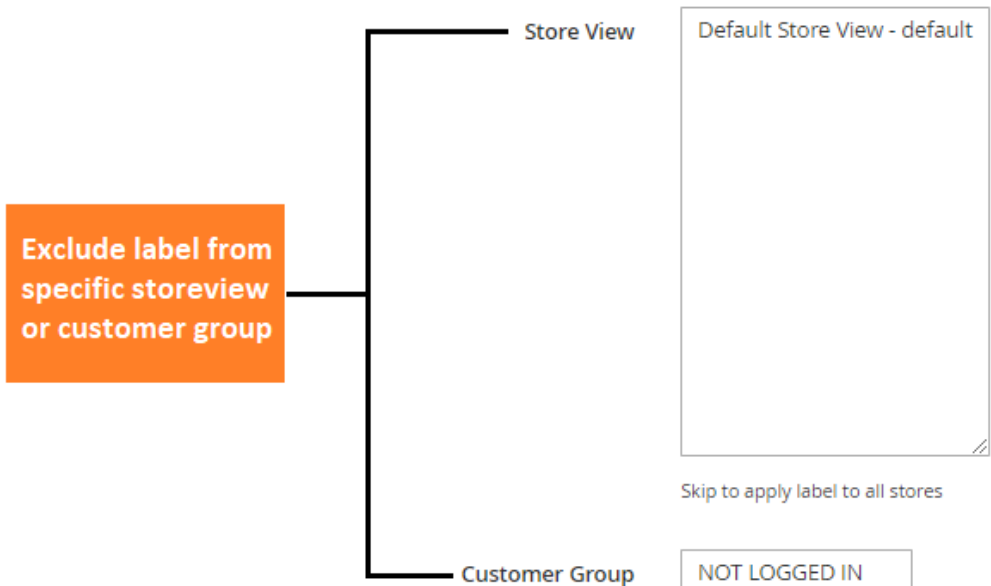

In **Image**: choose button to upload the label prepared beforehand to product thumbnail. To replace the label, click the button and re-upload another image.

Admin can adjust the size and move to locate the label anywhere within the product image.

In **Priority**: Insert one number to decide the priority of label display when “**Display multiple labels on product**” is set to *No* or there are multiple “Out of Stock” labels enabled.

In **Is Out-of-stock Product Label?**:

- Choose *Yes* to apply the label to all stock-out items. If so, there is no need to set label conditions.
- Choose *No* to apply the label to products based on label conditions.

In **Valid Start Date**: choose date and time to begin the display of label on the product image. Skip this field to apply the label to the ending date.

In **Valid End Date**: choose date and time to remove the label from the product image. Skip this field to always display the label from its starting date.

In **Store view**: Choose specific store views that product label is shown. Skip this field to display the label on all store views. Multiple-selection is allowed by holding Ctrl and clicking.

In **Customer Group**: Choose specific customer groups that product label is shown. Skip this field to display the label for all customer groups. Multiple-selection is allowed by holding Ctrl and clicking.

Similar to setting the Catalog Price Rule, the admin can define flexible conditions to apply the labels to various items.

*****Note:**

- If a label is not set condition and the config "**Is Out-of-stock Product Label**" is set to *No*, this label will be applied to all products on the site.
- When you make configuration changes to the label that was created, remember to reindex "**BSS Commerce Product Label Indexer**".

Remember to **Save** the label in completing the product label creation.
