1. Simple Details on Configurable Product for Magento 2 Overview

Simple Details on Configurable Product for Magento 2 supports showing all detailed information of each child product when choosing options, namely SKU, name, tier price, stock status, stock number, description and URL. Therefore, this extension is absolutely suitable for those selling configurable product with many different children products or for business purpose of each child item.

2. How Does It Work?

2.1 In the frontend

This is how Simple Details on Configurable Product is displayed in the frontend:

- Show details of children items of configurable product, such as: name, SKU, tier price, stock status, stock number, description, additional information and meta data.
- Get URL for each child product with preselected options.
 - URL: URL will change as chosen options. If customers access to the URL, options are also selected in the product page. Besides, you can get URL included category path as wish
 - Custom URL has a form: `.../Product-Name+attr1-Value1+attr2-Value2` (For instance: `.../hero-hoodie+color-Black+size-S`), it changes when choosing attributes of product.
- Support minimum quantity for product separately added to cart instead of the default of Magento 2, which only allows for configurable products.
- Support quantity increment for children products. This function outweighs the default with ability to set increment for each associated product of configurable product. For example, if you set 5 for quantity increment for a skirt-red-L, then your customers cannot buy this item with quantity 1-2-3 or 6-7-8, they only choose this product with 5-10-15 etc in quantity box.

2.2. In the backend

Go through **Stores** → **Settings** → **Configuration** → **BSS Commerce** → **Simple Details on Configurable Product**.

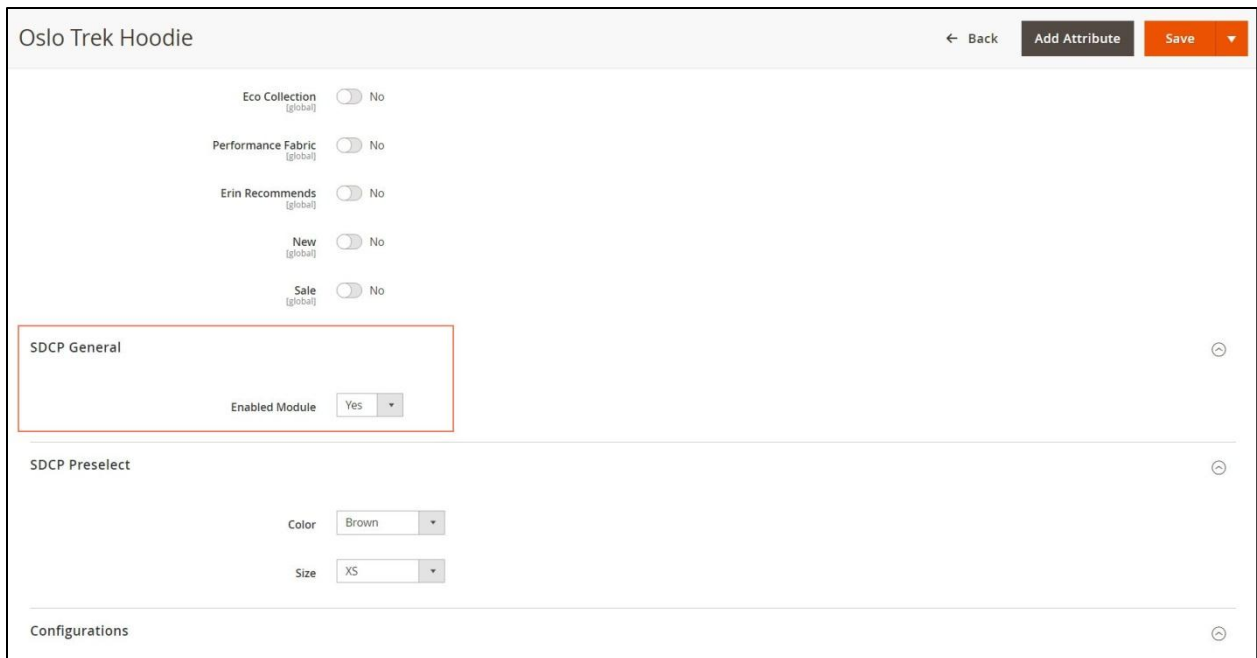

In **General**:

- Enabled: choose Yes to enable the module.

→ NOTE:

You can also enable/disable this module for particular configurable product in **SDCP General** in the product edit page easily.

In case in **General** configuration you set No, and in the **SDCP General** you still choose Yes, the module won't be enabled.

For configurable products with many children products, we strongly recommend choosing Yes in Enabled Ajax Load Detail to make it faster and more convenient for customers.

In case the admin disables Magento 2 Simple Details on Configurable Product extension, images displayed by swatch feature will not be blocked by parent product's image or placeholder image.

Attribute	Value	Use system value
SKU [store view]	Yes	<input checked="" type="checkbox"/>
Name [store view]	Yes	<input checked="" type="checkbox"/>
Descriptions [store view]	Yes	<input checked="" type="checkbox"/>
Tier Price [store view]	Yes	<input checked="" type="checkbox"/>
Stock Status [store view]	Yes	<input checked="" type="checkbox"/>
Gallery Switch Strategy [store view]	Replace	<input checked="" type="checkbox"/>
Min/max Qty Allow in Shopping Cart [store view]	Yes	<input checked="" type="checkbox"/>
Qty Increment [store view]	Yes	<input checked="" type="checkbox"/>
Additional Info [store view]	Yes	<input checked="" type="checkbox"/>
Meta Data [store view]	Yes	<input checked="" type="checkbox"/>

In **Attributes Display Config**: choose Yes to show the attributes you want in the frontend:

- SKU
- Name
- Description
- Tier Price
- Stock Status

- Gallery Switch Strategy:
 - + Replace: Replace all images of the configurable product with those of the children products.
 - + Prepend: Include images of the children products in the image list of the parent product.
 - + Disable: In any case, display image of the parent product only. It means when customers select options, image of the selected children product will not swatch accordingly.
- Min/Max Quantity Allow in shopping cart: this default feature now can support for simple products individually. Edit each child item page in the backend to set minimum or maximum quantity.
- Quantity Increment: this default feature supports every simple product of configurable product. Edit each simple product to set quantity increment.
- Additional Info
- MetaData

Advanced Settings

Custom URL [store view] Yes Use system value

Preselect [store view] Yes Use system value

In Advanced Settings:

- Custom URL: choose Yes to enable this feature.
 - ➔NOTE: in this configuration, if you want to get a new URL for simple product, you can type URL as you wish in the box (**Do not have neither '+' nor '~**); or you can let it blank and tick on checkbox as image below to take the URL of configurable product.
