

Location Services

Cloud based store Location Services!

[Magento 2 Extension Manual](#)[About Bullseye Location Services](#)

Version 1.0.0

Brought to Magento and Supported by Xumulus.com
bullseye@xumulus.com

Founded in 1998, Bullseye is the flagship product for Electric Vine, Inc. an established software development company located in Branchburg, NJ. Bullseye is a leading Store Locator Software and Location Management service for companies who sell products or services through a network of stores, dealers, or distributors.

Originally offered as a downloadable store locator application, Bullseye became a hosted service in 2005. Bullseye is known for its robust API, diverse features, and attentive customer service. Bullseye has provided locator services for over 3,200 clients in its various configurations.

Overview

This is the manual for the Magento 2 extension that enables location services to be used natively in Magento.

Installation

Magento Marketplace Installations

Please refer to Magento's online [instructions](#).

Manual Installations

Normally this extension would not be installed manually. In this event additional instructions will be provided with the installation package.

Configuration and Use

Signing Up for Bullseye Services

Please follow this [link](#) to sign up for a Bullseye Trial Account. Once you sign up you, go to the My Account section and find your API and Client ID.

Bullseye Details

Subdomain	xdemo.bullseyelocations.com
Status	Live
Account ID	5617
Search API Key	0c62e5d2-1aea-4084-a64a-45bdfec02bdd
Admin API Key	n/a

Loading Sample Data

If you are signing up for a trial and would like to load sample data, you can download it [here](#).

Then go to the Bullseye control panel and on the locations tab you can import the sample data.

The screenshot shows the Bullseye control panel interface. On the left, there is a sidebar with the following menu items:

- Dashboard (highlighted in red)
- Manage Locations (highlighted in grey)
- Import
- Export
- Email
- ...

The main content area is titled "Import Locations". It contains the following text: "Choose a method for importing your locations." Below this, there is a red button labeled "Upload File" with the sub-instruction: "Import locations from an uploaded CSV or XML file."

Configuring Basic API Settings

Navigate to

Stores->Configurations->Bullseye Locators->Store Locator

Setup the API key and Client id. These are found in your account info section of the Bullseye admin panel.

Version [store view]	1.0.0
Bullseye API key [store view]	<input type="text"/> 
First you will need to sign up for a Bullseye Account. Click here.	
Client Id [store view]	<input type="text"/>
Please see API Key instructions	
Google API key [store view]	<input type="text"/>
Google api keys are recommended as google could rate limit non API Keys	

Other General Settings

Top Link Text:

This will show the text of the link of the Mini Locator in the frontend. Typically depending on your theme that is the top right of the browser

Store Link Icon:

This will show the icon next to the link on the Top Links

CMS Page:

This is where you can select what CMS Page the store location page uses. You will need to go to the Bullseye application and login, and create a frontend then go to Magento and paste that into source view of the CMS Page editor. Remember to use source view.

The installer creates a page “\locations” that can be edited in the Magento CMS Page section of Magento. You can find web based instructions [here](#).

Text for Frontend

This section allows you to rewrite the default text used in the mini locator and elsewhere. For example, if you refer to your Stores as Dealers then this is the place to change that.

Mini Locator Title
[store view]

Find a Store

This defines the text for the title of the mine locator.

Search Text
[store view]

Find a store near ZIP code.

Text that appears just above the searchbox in the mini locator.

Saved Store Title
[store view]

Your preferred store:

The bold heading of the saved store section in the mini locator.

No Saved Store Message
[store view]

No saved stores yet.

Text that appears when no store has been saved.

Nearby Store List Title
[store view]

Other stores near you:

Text that appears at the top of the nearby stores list.

Search by ZIP Store Title
[store view]

Other stores near ZIP code.

Text that appears just above the search box in the mini locator.

No Near By Store Message
[store view]

We could not find a store near you.

Text that appears when no store is found in search radius by default current location.

Location Service Disable Message
[store view]

You have disabled the browsers location services

Text that appears when the location service of the browser is disabled.

No Searched Store Message
[store view]

We could not find stores near ZIP/Postal code.

Text that appears when no store is found in search radius after a zip/postal code search.

Find Store on Map Link Title
[store view]

Find a stores on map.

The text of the link to the main store location page on the bottom of the mini locator

Creating a Widget

Widgets allow you to embed maps and lists of store locations at various parts of your store. This allows either a locator to be shown on specific pages or embedded in CMS pages and blocks. Please consult the Magento documentation for more detailed instructions on Widgets. Below is an overview of the ones that are included with Bullseye Store Locations for Magento.

We include 2 Widgets:

- My Nearest Locations - A map or list of closeby stores
-

Home > Women

Women

STORES NEAR YOU

- My Store - the store previously saved in the mini locator

Creating a Widget

1. From the Content ->Widgets then Add Widget
2. Select the "My nearest locations" widget
3. Set the options

4. Select Where you would like it to show.

Example:

5. Save and Clear Caches

Including a Widget in a Block or CMS Page

1. From the CMS page WYSIWYG editor click the Insert Widget button .
2. Select either the "My Store" or "My Nearest Locations" widget.
3. Choose the desired options and select "Insert Widget".

Widget

Widget Type * ▲
My nearest location

Widget Options

Title

Finding the store

Click on “Store Locator” link in the top links by side of sign in or Create account.

Default welcome msg! [Sign In](#) or [Create an Account](#)  [Store Locator](#)

Search entire store here...

1 [Gear](#) [Training](#) [Sale](#)

On clicking the store locator link the popup will open with search box to find the store.

Buttons :

- 1) Use My Location - This button is used to get the list of store near to you based on your location latitude and longitude automatically. It will not show this button if you are on http, as it must be secured https for geolocation to work.
- > Keep Location access of browser “Allowed” or either it will show the message.

NOTE : The site must be secure site (ex:- <https://www.example.com>) for the “Use my Location” button to be visible.

- 2) Search stores on map - On clicking on this it will redirect to the CMS page that is set from setting in admin side , in which you can put Bullseye generated code (available from the Bullseye UI) for the store search on map.

Configuration

Save Config

This defines the link text for the top link section of Magento. Typically this is on the top of the page depending on your theme.

Store Link Icon [store view]	<input type="button" value="Choose File"/> No file chosen	
CMS page [store view]	<input type="text" value="Bullseye StoreLocator"/> ▼	
<small>This defines the Magento page you will paste the Bullseye embed code in</small>		

-
- 3) Find – Zip/Postal code is to be filled in the text box and then clicking the find button it will show the list of stores in that area.

Save Store & Display your store in map

Click on “Save” link for the store that you wish to save it as your store.

Your saved Store will show in popup under the heading “Your preferred store”.

This store will be saved until you change it or remove it.

NOTE: Map for the saved store and nearest store will be shown only in a secure site.

We can set the map view of saved store and nearest store in any page by creating widget as mentioned in above “Creating Widget” point.
