

CardGate Extension for Magento 2

Manual

CardGate Extension for Magento 2	1
Introduction	3
Setup requirements	4
Installing the CardGate Extension for Magento 2	5
Configuration	6

Introduction

This manual describes the integration of the CardGate payment extension into your Magento 2 Webshop.

First, you will need to have an account set up, at CardGate, your payment service provider.

You may do so, at <https://www.cardgate.com/en/sign-up/>

If you have any questions, please contact us at <https://www.cardgate.com/en/contact-form/>, where one of our accountmanagers will be happy to assist you.

Setup requirements

Your account manager will provide you with several parameters, which you will need in order to complete the setup.

These are:

1. API Username
2. API Password
3. Website ID
4. Hashkey

Installing the CardGate Extension for Magento 2

The extension is installed using Composer. To install our extension, use the following commands using the commandline interface:

1. Go to your Magento 2 root folder
2. Enter the following command to install the module:

```
composer require cardgate/magento2
```

Wait while dependencies are updated.

3. Enter the following commands to enable the module.

```
php bin/magento module:enable Cardgate_Payment  
php bin/magento setup:upgrade  
php bin/magento setup:di:compile  
php bin/magento cache:clean
```

4. If Magento is running in production mode, deploy static content:

```
php bin/magento setup:static-content:deploy
```

Configuration

- Open the Magento Admin panel, and view the CardGate plugin-configuration:
 - Stores > Configuration
 - Sales > CardGate
- Fill in the CardGate configuration section using the API credentials obtained earlier.
- Save config.
- Refresh the active payment methods.
 - CardGate information section
 - Paymentmethods > Refresh active payment methods
 - Check the output
- After the payment methods are refreshed successfully, all active Payment method sections can be enabled and edited.
