

# ChannelUnity Magento 2 Integration

## User Guide v1.0.1

This module connects ChannelUnity to Magento 2. For more information about ChannelUnity please visit our website <https://www.channelunity.com>

## Requirements

The ChannelUnity module requires Magento 2.0.x-2.2.x. There are no further requirements beyond what is required by Magento itself. The cronjob feature as described below relies on the Magento cronjob being setup correctly as part of the standard installation.

## Installation

Please follow the standard installation procedures for installing Magento 2 modules. The module is available on github at the following location.

<https://github.com/ChannelUnity/Magento-2-Module>

To install you can upload the module code to your Magento server. Then run this command at the command line on your server: `php bin/magento setup:upgrade`

## How to use

1. If you haven't already got a ChannelUnity account, please visit <https://www.channelunity.com/> and sign up for a free trial.
2. You will receive a Merchant name, User name, and password.
3. Log in to your Magento admin panel, and click on Stores -> Configuration.
4. Click on ChannelUnity -> Set up ChannelUnity.
5. Fill in the Merchant Name, User Name, and Password boxes with your corresponding details. The API Key box should be left blank.
6. Click on Save Config.
7. Log into ChannelUnity and click on Setup -> Online Stores.
8. Click to add an online store, and follow the instructions onscreen.
9. Your ChannelUnity account should now be connected to Magento 2.

From now on your Magento products will be automatically synced to your ChannelUnity account. Orders made on marketplaces you connect to ChannelUnity will be automatically pulled into Magento for you.

# Settings

## **Ignore Disabled Products**

Setting No means that Disabled products come into ChannelUnity. Setting Yes means Disabled products do not come into ChannelUnity.

## **Force Tax Values Into Imported Orders**

Set to Yes to force tax values from the marketplace into orders. Set to No and Magento will set tax values in the default way according to your current settings.

## **Ignore Quantity For FBA Orders**

Set this to Yes to ensure that qty is not decreased for orders that Amazon fulfil (FBA).

## **Sync Stock And Price**

This option sends stock and price values for all products to ChannelUnity on a regular basis.

## **Allow Stub Product Creation**

Allow creating of stub products in Magento when an order is imported with a SKU that doesn't exist.
