Installation

In order to install any extension for Magento 2, the first thing to do is to create the folder ‘**code**’ under ‘app’ in Magento 2 root category, similar to the screenshot below.

In Magento 2, extension files are placed in one module folder so there is no need to copy files to different directories like it used to be in Magento 1.

These are the steps is to install the extension:

1. Open the console, please type: "*php bin/magento module:enable Cminds_Faq*" and hit Enter.

```
php bin/magento module:enable Cminds_Faq
```

2. Follow with command “*php bin/magento setup:upgrade*”.

```
php bin/magento setup:upgrade
```

3. Then do the same with the command '*php bin/magento setup:static-content:deploy*'.

```
php bin/magento setup:static-content:deploy
```

After those steps, you should see that our module is enabled.

To check the list of enabled modules, you can:

- Run the command '*app/etc/config.php*' in the console command; or,
- Go to **Stores** → **Configuration** → **Advanced** → **Advanced** in the Admin Panel

The last thing that you need to do is to flush Magento cache. You can do this in two ways:

- Running in console command the command `'php bin/magento cache:clean'`:

```
php bin/magento cache:clean
```

- In the Admin Panel, please go to System → Cache Management, select all elements and click '**Flush Magento Cache**'.
