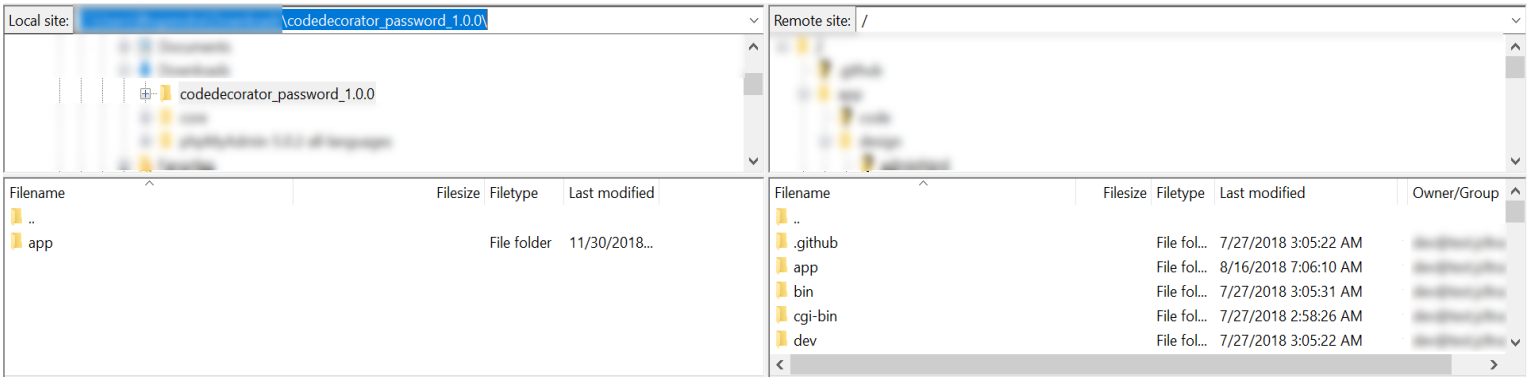
CodeDecorator Customprice

Installation Guide

Installation steps

1. Upload extension folder

- Get extension from our extension store or from marketplace.
- Unzip the extension and upload the folder structure to your store root directory like following image



2. Install and activate the Module

Login to your SSH server and go to your root directory of Magento2 installation. Enter the following commands via SSH using putty or others.

php bin/magento setup:upgrade

following is the example:

```
:/var/www/html$ php bin/magento setup:upgrade
```

Deactivate module steps

1. **Deactivate using SSH (Command Line)**

   Login to your SSH server and go to your root directory of Magento2 installation. Enter the following commands via SSH using putty or others.

   php bin/magento module:disable Codedecorator_Core

   php bin/magento module:disable Codedecorator_Customprice

2. **Flush the cache**

   You can flush the cache from the admin or you can do it using following command in SSH login.

   php bin/magento cache:clean

Remove module steps

1. **Deactivate using SSH (Command Line)**

   Login to your SSH server and go to your root directory of Magento2 installation. Enter the following commands via SSH using putty or others.

   php bin/magento module:disable Codedecorator_Core

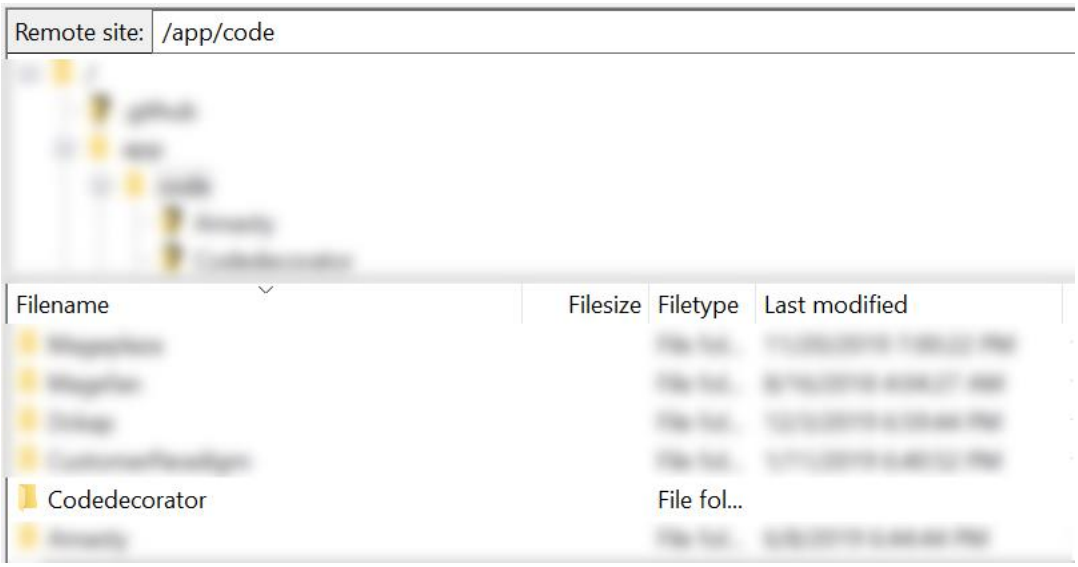
   php bin/magento module:disable Codedecorator_ Customprice

2 Remove the module directory

Remove module directory using the FTP manger and delete the director available on following directory path

<Magento2 Root Director>/app/code/Codedecorator/

It should look like following



3 Flush the cache

You can flush the cache from the admin or you can do it using following command in SSH login.

php bin/magento cache:clean
