

CrowdSec Bouncer extension for Magento 2

Installation Guide

Requirements

- Magento \geq 2.3

Installation

Use **Composer** by simply adding **crowdsec/magento2-module-bouncer** as a dependency:

```
composer require crowdsec/magento2-module-bouncer
```

Post Installation

Enable the module

After the installment of the module source code, the module has to be enabled by the Magento 2 CLI.

```
bin/magento module:enable CrowdSec_Bouncer
```

System Upgrade

After enabling the module, the Magento 2 system must be upgraded.

If the system mode is set to production, run the compile command first. This is not necessary for the developer mode.

```
bin/magento setup:di:compile
```

Then run the upgrade command:

```
bin/magento setup:upgrade
```

Clear Cache

The Magento 2 cache should be cleared by running the flush command.

```
bin/magento cache:flush
```

Deploy static content

At last, you have to deploy the static content:

```
bin/magento setup:static-content:deploy -f
```
