

USER GUIDE

AUTOLOAD RELATED PRODUCT

For Magento 2.x

The Extension

Cubet Autoload related Products is a Magento 2 extension, which automatically detects the related products from the main product's categories and show them in the frontend as a responsive block.

Installation

To install the extension manually, please follow the Installation Guide available along with the extension. If you need help on installing the extension, please feel free to contact us for the installation support.

Configuration & Setting Up

The extension is using jQuery Plugin *Owl Carousel* to maintain its responsiveness. Also, a html developer can easily change the responsive settings through its template file.

The configuration and setting up of the block is very easy.

How it works

The working of Autoload Related Products are based on very simple method: **Categories**. When a customer visits a product the Autoload Related Products will check the product categories and fetch the products that are come under the filters available in Configuration. To get the accurate related products, please make sure you are assigning the products into right categories.

Configuration Fields

- **Enable**- This Yes/No dropdown enable/disable the extension output, if the extension needs to disable temporarily we can turn off the block by selecting the option No. The default value is “Yes”.
- **Related products to show** - This is number of related products that should display in the frontend carousel. If your system is in moderate server load, it is recommended to put a minimum 2 digit value. If your server has enormous memory and faster response, you can try any number till you find the product view page loading without much time. The default value is “10”.
- **Price From** - The Price from is the field to filter the minimum price of product that should show in the carousel. The default value is 0.
- **Price To** - The Price to is the field to filter the maximum price of product that should show in the carousel. This is an optional field, but if we need to filter out products above a price range can put in it.

Frontend

The extension will automatically fetches the related products from the categories and show them in the frontend. The frontend block will look like this.

Support

If you find difficult on installing and configuring the extension , please choose the Installation service while purchasing the extension. For further queries, please contact us at support@cubetech.com.
