

Auto Store Switcher

INSTALLATION GUIDE

For Magento 2.x

Installation Instructions

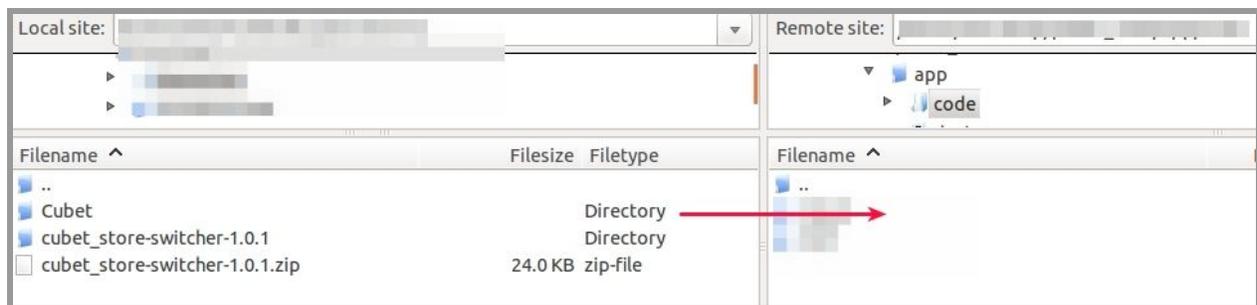

1. Unzip the extension package
2. Copy the package in your Magento store root.
3. Install the Extension via Command Line.
4. Rebuild static contents and compile.
5. Clear the Magento Caches.

Unzip the Extension and Check the Contents

If you choose to install the package manually, you need to unzip the folder received. It will show like the image above. To extract the same, we need to create a folder named **"Cubet"** and then another folder named **"StoreSwitcher"** and paste the contents of zip to the folder.

Move the folder files to your Magento Instance

Upload the folder and make sure all the files are passed to your Magento app/code directory. If your code-base does not have code directory, you can create one. Before doing the upload, it is recommended to take a backup of your Magento code-base and database.

Once the code is moved, please make sure there is folder created inside your app/code folder named, **Cubet** and under it another folder named [StoreSwitcher](#).

Install the Extension

Once we make sure the extension files are in the server, we can enable the extension. To do the same, please open command prompt which connected with the server and pointed to the Magento Root Folder.

Run the following command to enable the extension

```
php bin/magento module:enable Cubet_StoreSwitcher
```

To Include the files and ran the database related scripts, please run the following command.

```
php bin/magento setup:upgrade
```

Run the compiler to compile the files.

```
php bin/magento setup:di:compile
```

Finally, deploy the static files.

```
php bin/magento setup : static - content : deploy
```

All Done, the extension is now ready to use.

Admin Configurations

Once the installation procedure is over, you can configure the extension in System > Configurations.

The screenshot shows the 'Configuration' page for 'Auto Store Switcher Settings'. At the top, there is a 'Store View' dropdown set to 'Default Config' with a help icon. A sidebar on the left contains a menu with 'CUBET' (expanded), 'Auto Store Switcher', 'GENERAL', 'CATALOG', and 'CUSTOMERS'. The main content area is titled 'Auto Store Switcher Settings' and contains two configuration fields: 'Enable Store Switcher' (a dropdown menu currently set to 'No' with a help icon and the text 'Enable\Disable the Extension') and 'Disabled IP Addresses' (a text input field with a help icon and the text 'IP Addresses, which needs to disable the switching (seperated with comma for more than one IP)').

Configuration Fields

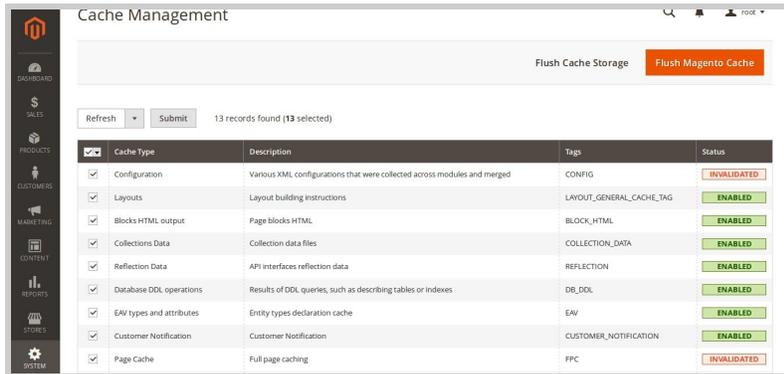

- **Enable/Disable Store Switcher** - To enable or disable the auto store switching feature.
- **Disabled IP Addresses** - Comma separated list of IP addresses, which needs to bypass the store switch.

Further details are mentioned in the Installation Guide. Please follow the same.

Clear Caches

Please go to the Cache Management and Clear the Caches. This can also be done with Magento CLI using the following command.

`php bin/magento cache:flush`

The screenshot shows the 'Cache Management' page in a Magento admin interface. At the top, there are buttons for 'Flush Cache Storage' and 'Flush Magento Cache'. Below these, there is a 'Refresh' button and a 'Submit' button, with a message indicating '13 records found (13 selected)'. The main content is a table with the following columns: Cache Type, Description, Tags, and Status. The table lists various cache types, most of which are 'ENABLED', while 'Configuration' and 'Page Cache' are 'INVALIDATED'.

Cache Type	Description	Tags	Status	
<input checked="" type="checkbox"/>	Configuration	Various XML configurations that were collected across modules and merged	CONFIG	INVALIDATED
<input checked="" type="checkbox"/>	Layouts	Layout building instructions	LAYOUT_GENERAL_CACHE_TAG	ENABLED
<input checked="" type="checkbox"/>	Blocks HTML output	Page blocks HTML	BLOCK_HTML	ENABLED
<input checked="" type="checkbox"/>	Collections Data	Collection data files	COLLECTION_DATA	ENABLED
<input checked="" type="checkbox"/>	Reflection Data	API interfaces reflection data	REFLECTION	ENABLED
<input checked="" type="checkbox"/>	Database DDL operations	Results of DDL queries, such as describing tables or indexes	DE_DDL	ENABLED
<input checked="" type="checkbox"/>	EAV types and attributes	Entity types declaration cache	EAV	ENABLED
<input checked="" type="checkbox"/>	Customer Notification	Customer Notification	CUSTOMER_NOTIFICATION	ENABLED
<input checked="" type="checkbox"/>	Page Cache	Full page caching	FPC	INVALIDATED

How To

Please check the User Guide for the instructions and they are very simple steps to follow to know how to add amount to the wallet and how to use it.
