1. Introduction

flexiPIM's Magento 2 extension helps distributors streamline marketing-ready information from flexiPIM to their Magento 2 store. The synchronization of information between flexiPIM and Magento is done within flexiPIM.

2. Version and Compatibility Support

Magento Community Edition (CE) 2.3.x.
Magento Community Edition (CE) 2.4.x
Magento Enterprise Edition (EE) 2.3.x.
Magento Enterprise Edition (EE) 2.4.x

3. Features

flexiPIM - Flexible Product Information Management - centralizes and manages all your product data in one place, thus providing a compelling product experience. Here's what you can do with flexiPIM-

- **Categorize** product information from a single repository.
- Product information is accessible to teams across the organization and with **role-based access**, control who gets to access what data.
- Enrich product information with videos, images, files, and so on with **digital asset management.**
- **Bulk edit,** product information with filters, and save important views.
- **Bulk import and export** product information within seconds from a single dashboard. Import repetitive data formats with **template imports**.
- Feed rich content into multiple sales channels easily with an **intuitive user experience.**

- Sell expansively with **multilanguage** and **multicurrency** options.
- **Built-in connectors** that **integrate** with existing systems (ERP, DAM, POS, content aggregators, and so on) and third-party platforms (eCommerce marketplaces, websites, and so on) without any data loss.
- **Create rules** to apply on bulk information at once and edit products as frequently as you like.
- Manage **multiple Magento 2 stores** from a single instance in flexiPIM
- Know how your functions are performing. flexiPIM generates insightful **reports and metrics** showcasing the progress of a project.

4.How to Install This Module?

Step 1: Download extension from My Downloadable Products in your account from our store or download the package from Magento Marketplace.

Step 2: Unzip the file on the location Root/app/code/flexipim.

Step 3: Enter the following at the command line to enable the module.
php bin/magento module:enable Flexipim_Connector

Step 4: Enter the following in the command line to run setup scripts.
php bin/magento setup:upgrade

Step 5: Enter the following at the command line if the mode is set to default or production to deploy all the static files.
php bin/magento setup:static-content:deploy

Step 6: Clear the cache to configure the settings in the backend (if you skipped Step3)
php bin/magento cache:clean

Step 7: Log in to Magento backend and navigate to Store > Configuration > flexiPIM Configuration> Configure the flexiPIM details

Step 8: Clear cache to apply all configurations (if you skipped Step 3)
php bin/magento cache:clean

That's it. You are done. If you still face any issues while installing, contact us at support@flexipim.com

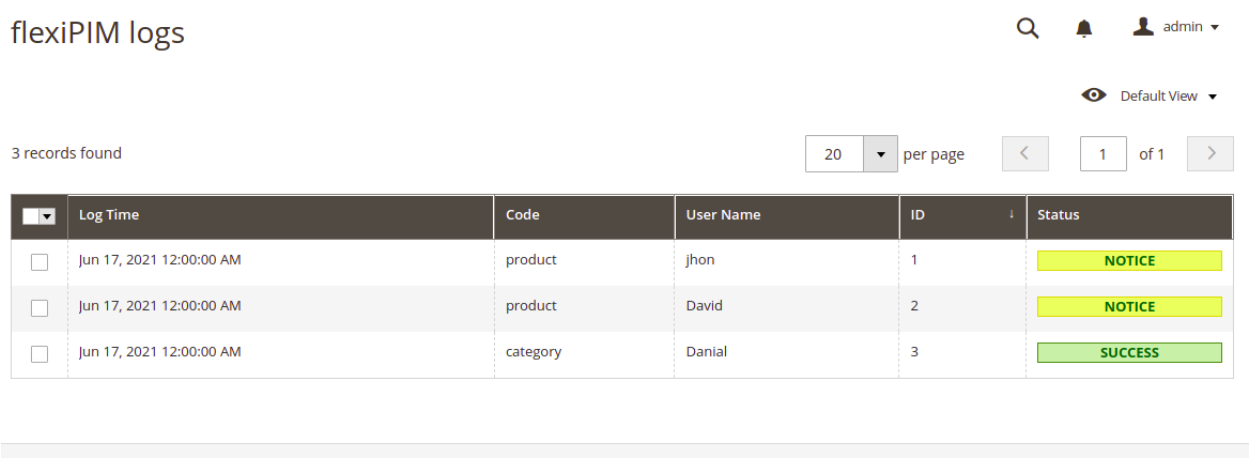
5. flexiPIM Magento 2 Extension

The flexiPIM Magento 2 extension is built within Magento to get the log details from the flexiPIM API.

6. flexiPIM's Magento 2 Dashboard.

In the flexiPIM dashboard, the data logs are displayed. The imports from flexiPIM to Magento are done via Magento Rest API.

The dashboard consists of the details of the previous syncs like start time, user status, and comments on the previous syncs.



6. Configuration

This page is used for the API configuration. The API key and the API token are used to verify the request. A test connection button tests whether the given details are valid or not.
