Introduction to Ajax Login

Ajax login provides an easy way to register, login and retrieve forgotten passwords. This happens via a pop-up window without refreshing the current page.

For example, when you log in with a default Magento installation, clicking the "sign in" top link will load a new page (the login page). With AJAX Login, clicking the "sign in" top link will display a popup in which the users can login. In this latter case, there is no page refresh or reload.

Ajax Login module is compact, provides a better customer experience and interactivity and, helps in easier navigation. Also the traffic to and from the server is reduced a considerable amount.

Version & Compatibility Support

Version:

1.0.0 Stable

Compatibility:

This extension is compatible from Magento Community 2.1x and Magento Enterprise 2.1x to the latest versions.

Features

- Enable/Disable the ajax login module from the backend.
- Users can login / register without waiting for the page to load.
- Enable the address fields for customer registration page from the backend.
- Option to be redirected to the current page once login is successful.

How to install this Module?

Step 1: Download/purchase the extension.

Step2: Create a directory `app\code\DCKAP\Ajaxlogin` in your Magento Installation directory.

Step 3: Unzip the file in the above directory.

Step 4: Enter the following at the command line:

```
php bin/magento module:enable DCKAP_Ajaxlogin
```

Step 5: Enter the following at the command line:

```
php bin/magento setup:upgrade
```

Step 6: Login to Magento backend and navigate to Store -> Configuration -> DCKAP->Ajax Login and configure the module.

Step 7: Clear the cache using the following command:

```
php bin/magento cache:clean
```

Module Configuration

To enable the extension, go to STORE > Configuration and from the left side menu navigate to DCKAP -> Ajax Login

General Configuration

General

Enable
[global]

Select 'Enable' to 'Yes' for enabling the module.

Address Setting

Enable Address Fields in Customer Register Form
[global] Use system value
Address Fields are not showing if "No" is selected.

Select 'Enable Address Fields in Customer Register Form' to 'Yes', to display the address fields in the Customer Register Form in the pop up window.

Address Fields will not be displayed if 'No' is selected.

Login Setting

Redirect Customer to Account Dashboard after Logging in [global] Use system value

Customer will stay on the current page if "No" is selected.

Select 'Customer to Account Dashboard after logging In' to 'Yes', to redirect the customer to Customer Dashboard after successful login.

If no, the customer will stay on the current page.

Login Form

When you click on the 'Sign in' link which is located in the top link, the 'Customer Login' pop up window will open.

Once the customer login is authenticated, the pop up login form will close and redirected to an appropriate page.

Note: In the Magento Enterprise Edition, the attributes created in the backend will be displayed in the front-end.

If the customer address form field setting is not enabled, then the customer custom address form fields will not be displayed in the front-end.

Forgot Password Form

When you click on the 'Forgot password' link in the 'Customer Login Form' the Forgot Password pop up window will open.

A screenshot of a 'Forgot Your Password' pop-up window. The window has a title bar with a close button (X) in the top right corner. The main heading is 'Forgot Your Password'. Below the heading is a horizontal line, followed by the instruction: 'Please enter your email address below to receive a password reset link.' There is a label 'Email *' followed by a text input field. At the bottom left of the form is a blue button with the text 'Reset My Password'.

Once the forgot password reset process is successful, the pop up login form will close and the customer will be redirected to the current page.
