

How To Install Magento Extensions

There are 2 ways to install Magento extensions

1. Installing a Magento Extension manually via FTP or SSH

- Step1: Download your extension Tar/Zip File from the download links where you have purchased the extension
- Step2: Extract the zip files
- Step3: Connect your FTP using FTP Manager
- Step4: Now upload your files according to folder structure
- Step5: Refresh Magento Cache and now Your Magento extension are installed and Ready

2. Install Magento Extensions via Magento Connects Manager Using Tar Files

- Step1: Download your extension Tar/Zip File from the download link where you have purchased the extension
- Step2: After download, in order to install this Magento community extension into your Magento store, you need to login to your store admin panel and go to System->Magento Connect->Magento Connect Manager. Magento connects manager will ask you to login again. You need to use your store admin login credentials to get past the login screen. You need to upload the extension of Direct package files to upload section and upload the tar file.
- Step3: After uploading the files revert back to Magento admin panel and refresh the cache
- Step4: Your Magento extension is installed and ready
