

User Guide for the Dropday extension for Magento

Thank you for choosing the Dropday extension for Magento. This is the manual for installing and configuring the extension.

Install and configure the extension

Step 1 – Go to Magento Marketplace and install the extension

Step 2 – Navigate in your Magento Store Admin to *Stores > Settings > Configuration > Dropday > Order Automation*

Step 3 – Make a free account at dropday.io/register

Step 4 – Generate an *API-key* and an *Account-ID* in your Dropday account

Step 5 – Copy your *API-key* and *Account-ID* from your Dropday account and paste it in your Magento Extension

Step 6 – Your Magento store is now connected to your Dropday-account.

Test the extension

To test the extension, make sure that *Test Mode* is enabled in the extension.

Configure your Dropday account

To use the Dropday extension correctly it is important to follow the following steps:

Create a supplier

Create a supplier and choose your forwarding method. After choosing the method you can configure it.

Set a rule

To connect products to your suppliers it is important to create rules. You can connect products based on product name, product brand, product supplier, stock quantity, EAN-13 and more.

Receive a test order

After configuring your extension and your Dropday account, it is time to send test orders to Dropday to test if everything is configured properly.

Get started

If everything is configured properly it is time to get started. Now you can disable test mode in your extension (*Stores > Settings > Configuration > Dropday > Order Automation*). New orders are now automatically forwarded to Dropday and ordered from the correct supplier.
