REFERENCE MANUAL

INVOICE PDF GENERATOR PRO

- Magento 2 -

Note: For any bug reports, please report these here via mdevel@eadesign.ro

Reference Manual

Quick Links

This User Manual is structured in the following sections:

- 1. Installation**
- 2. Set up in Magento**
- 3. How to use Invoice PDF Generator Pro**
- 4. Troubleshooting**

You can use these quick links and the links on the left sidebar to navigate quickly around this reference manual.

Reference Manual

1. INSTALLATION

For all types of installations you need to install Composer first from:

<https://getcomposer.org/download/>

Where you can find our modules:

1. **Magento Marketplace:**

<https://marketplace.magento.com/developer/EaDesign>

2. **Our site:** www.eadesign.ro

3. **GitHub:** <https://github.com/EaDesgin>

4. **Packagist:** <https://packagist.org/packages/eadesignro/>

See our Installation Manual Guide for detailed information.

Note: For any bug reports, please report these here via mdevel@eadesign.ro

Reference Manual

2. SET UP IN MAGENTO

After the install you need to go to the System-> Configuration area in Magento to enable the module and to enable the email attachments.

User Permission Settings

To set up user permissions you need to **System > Permissions > User Roles**.

If the user can print out the standard Magento PDF invoice he will be able to the same with the custom one from our extension.

❖ PDF Print-outs uses Stores -> Settings -> Configurations -> PDF Print-outs

If you are an admin you will be able to go directly to the settings and do the configuration. For users with limited roles you will need to add the permissions (the same as how standard Magento works).

See our User Manual Guide for more details

Reference Manual

3. HOW TO USE

Using EaDesign **Invoice PDF Generator Pro** the admin user can print PDF files with customized printout layouts.

The admin user can use the template system from our extension to customize the PDF templates in the same way he can customize the email templates. That is a big plus because the store owner can do that for each store.

First of all you need to know that the **Invoice PDF Generator Pro** uses the same system to process the template variables and data from the template.

On the template body tab you can find the field named **source** (invoice) where you need to set the entity you want the variables for. This is the actual invoice id, 1 for the first invoice created but you can use the one you need.

Using the template variables you can achieve any design and configuration.

Reference Manual

In CSS section you can create styles for the html like "h1 {color:red;} h2 {color:blue}", it's not necessary to use the style tag.

In the settings tab are the values used to shape the template as you need. The "**Template file name**" can be made from variables as long as they are ok for file naming **{{var invoice.increment_id}}-{{var invoice.id}}-file-invoice**. You can modify the orientation of page as landscape or portrait and also the format.

See our User Manual Guide for more details.
