

## Installation Instructions

### Requirements

Composer installation:

- ssh access to your magento server with enough privileges
- composer command installed and configured

Web setup wizard installation:

- admin access to your magento as superuser

Manual installation:

- ssh access to your magento server with enough privileges
- the zip file of the extension that you download from the magento marketplace
- the zip command installed in your server

### Installation

#### Composer installation:

open an ssh to your magento server

be sure that the user that you are using is the same that you use to purchase the extension in the marketplace

to install the extension run composer require ebizmarts/shoppingcartsuite

verify that the extension is installed run bin/magento module:status

enable the extension, run bin/magento module:enable

Ebizmarts\_ShoppingCartSuite --clear-static-content

Upgrade your magento installation, run bin/magento setup:upgrade

Recompile your installation, run bin/magento setup:di:compile

Refresh your cache, run bin/magento cache:clean

#### Web setup wizard installation:

Open your magento admin page with a superuser

Follow the instructions on

<https://devdocs.magento.com/guides/v2.3/comp-mgr/extens-man/extensman-main-pg.html>

#### Manual installation:

Download the zip file to your local environment

Unzip the zip file in your local environment

Open an ssh to your magento server.

- Go to the document root of your magento installation
- Create a directory app/code/Ebizmarts/ShoppingCartSuite
- Upload the content of the zip file to this directory via ftp or scp
- in the magento root directory run:
  - bin/magento setup:upgrade
  - bin/magento cache:clean
  - bin/magento -f setup:static-content:deploy
