

# How to install eMagicOne Premium SEO?

## Variant 1

1. Run commands in the console:

```
composer require emagicone/module-core @dev  
php bin/magento setup:upgrade  
php bin/magento setup:static-content:deploy
```

2. Run following command if your store is in Production mode:

```
php bin/magento setup:di:compile
```

## Variant 2

1. Download **Emagicone\_Core** module from GitHub

You can either clone or download the module at this link:

<https://github.com/eMagicOne/Magento2Core>

2. Download the zipped extension from your Magento marketplace account.

3. Upload files to server.

Using FTP/SFTP/SSH access, upload extracted files to project folder (<magento\_dir>/app/code/).

4. Run command line by using following commands:

```
php bin/magento setup:upgrade  
php bin/magento setup:static-content:deploy
```

5. To complete the installation configure module in **Store -> Configuration -> Emagicone -> Seo**
