Installation	3
Disable Module.....	10
Support.....	10

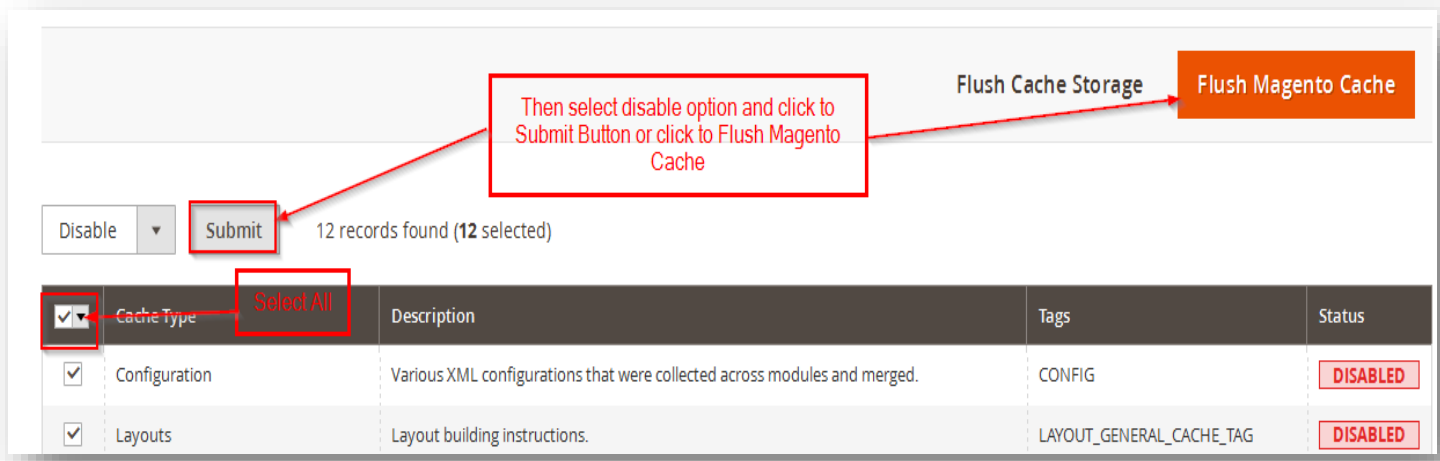

Installation:

Before Installing the Extension, Backup your web directory and store database then you have to log in into the admin panel and then clear the Cache or Disable the cache.

Firstly you will need to access your admin dashboard and navigate to **System> Cache Management**.

Now you will get Cache Management page.

-----:REQUIRED:-----

Expert_Main Module should be installed first before installing any other extension from our store. Our extension is dependent on **Expert_Main**. Installation of both extension are same please follow the below document.

If you have already installed this for your store, then you don't need to install.

Download from this url

http://expertsofttechsolutions.com/media/Expert_Main.zip

OR

[Download Expert Main](#)

Two methods to install the extension, you can choose your way.

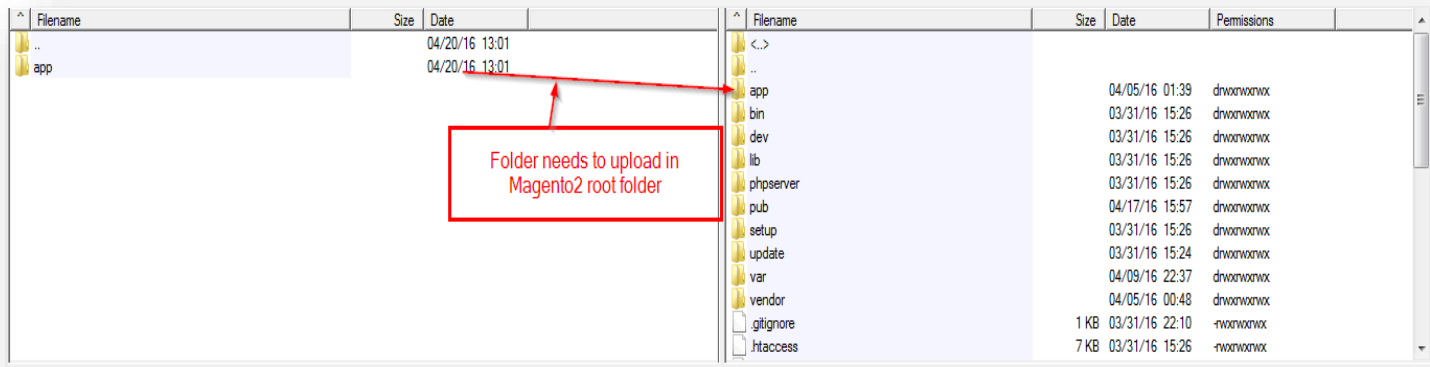

- 1) File transfer Method
- 2) Component Manager Method

1) File transfer Method :

It contains following steps

Step 1 : Extract the archive (Expert_Modulename-version.zip)

Step 2 : upload the app folder in Magento2 root directory

Step 3 : Now after the successful upload, Open the terminal (cmd), then run the command on Magento2 root directory-**“php bin/magento setup: upgrade”**

```

app      Gruntfile.js      phpserver
bin      index.php         pub
CHANGELOG.md      .git              setup
composer.json     LICENSE_AFL.txt  shippo.php
composer.lock     LICENSE.txt      update
CONTRIBUTING.md  MSample2.zip    var
CONTRIBUTOR_LICENSE_AGREEMENT.html  nginx.conf.sample  vendor
COPYING.txt      package.json
dev          php.ini
-----:/var/www/html/magento2now# php bin/magento setup:upgrade █

```

Also, run this commands in the Magento2 Root- **“php bin/magento setup: static-content:deploy”**

```

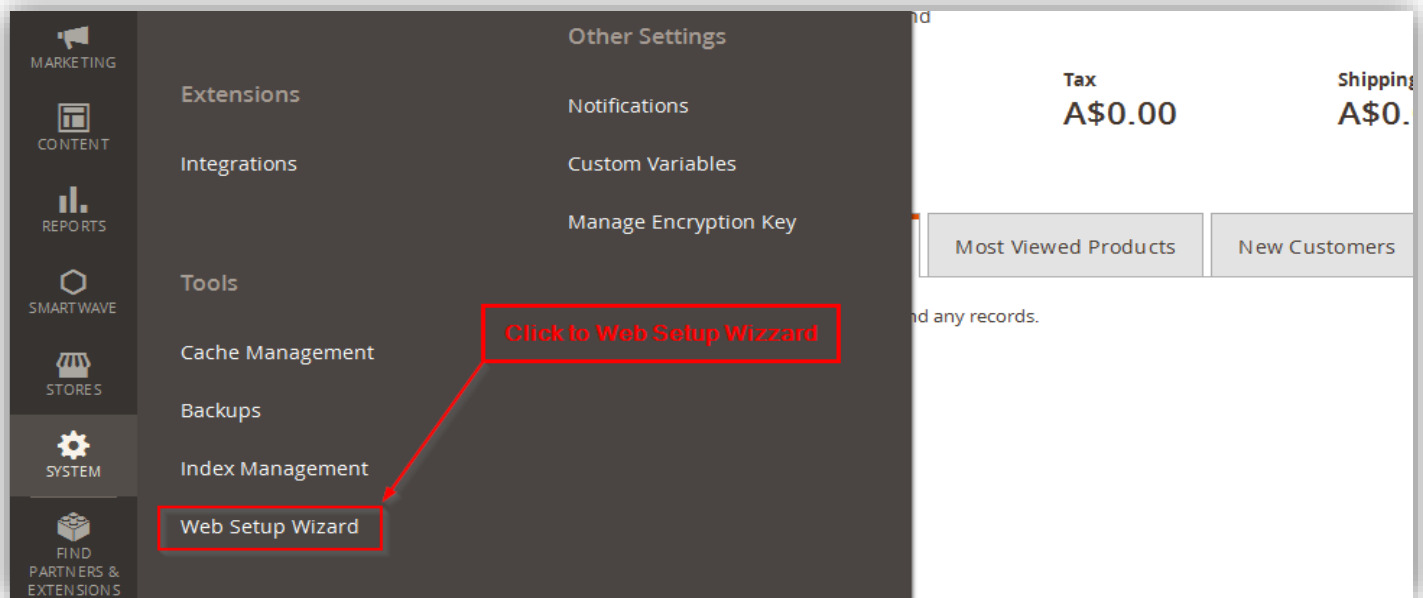

app      Gruntfile.js      phpserver
bin      index.php         pub
CHANGELOG.md      .git              setup
composer.json     LICENSE_AFL.txt  shippo.php
composer.lock     LICENSE.txt      update
CONTRIBUTING.md  MSample2.zip    var
CONTRIBUTOR_LICENSE_AGREEMENT.html  nginx.conf.sample  vendor
COPYING.txt      package.json
dev          php.ini
-----:/var/www/html/magento2now# php bin/magento setup:static-content:deploy █

```

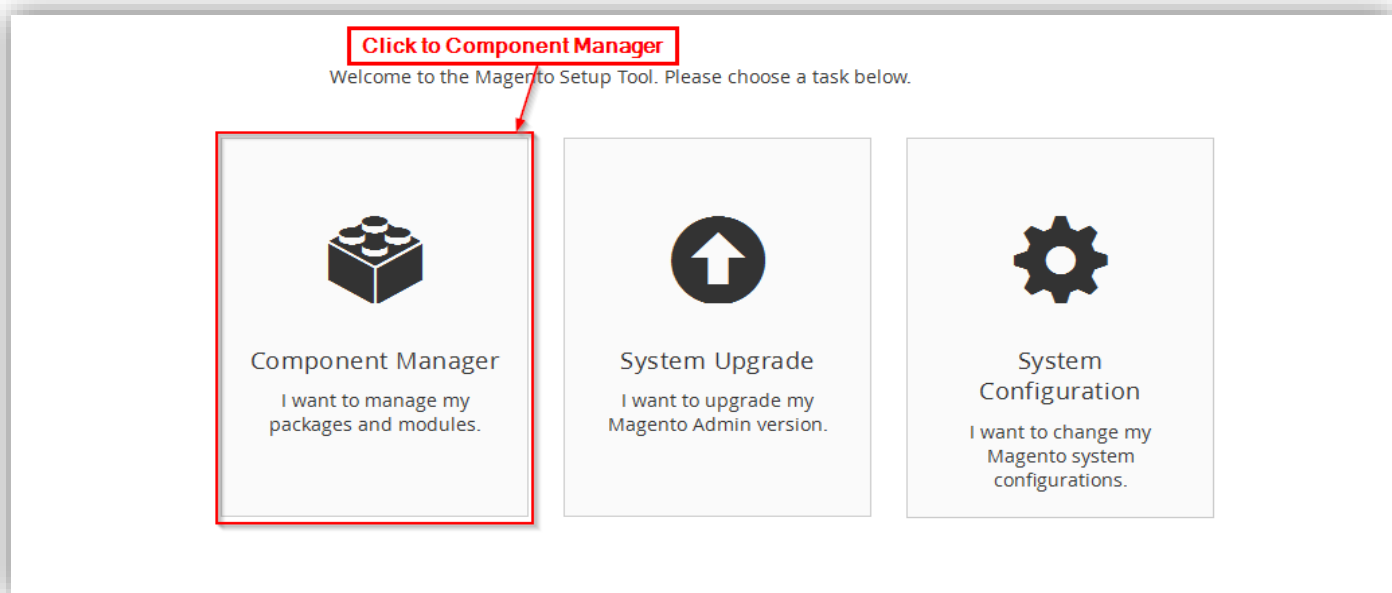

1) Component Manager Method:

It contains following steps

Firstly you will need to access your admin dashboard and navigate to **System>Web Setup Wizard**.

Now you will get 3 blocks of options, from that choose **the Component Manager**.

After selecting component manager you will see the already installed extensions on your website, any new updates for them and also any new extensions which you can install. Click on the **Enable** .

Component Name	Module Name	Version	Type	Vendor	Actions
			module		Select ▾
Expert FWshare	Expert_FWshare	2.0.0	module	Expert FWshare	Select ▾
Expert Main	Expert_Main	2.0.0	module	Expert Main	Select ▴
magento/framework		100.0.6	library	magento	Enable
magento/language-de_de		100.0.5	language	magento	
magento/language-en_us		100.0.5	language	magento	
magento/language-es_es		100.0.5	language	magento	

click to select and then Enable option

After that complete following 3 steps

Step 1: Readiness Check

Now come to Readiness Check which will check whether your Magento 2 installation has all of the necessary components required for the extension installation. Click on the Start Readiness Check button.

Readiness Check 2 Create Backup 3 Component Install

Back Next

Step 1: Readiness Check

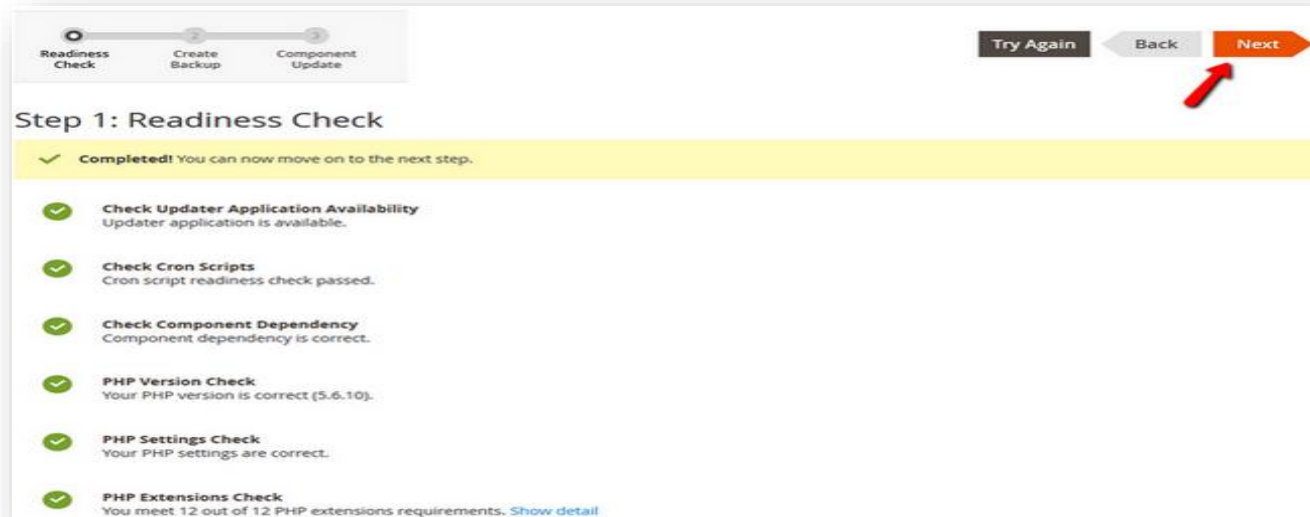

Let's check your environment for the correct PHP version, PHP extensions, file permissions and compatibility.

Start Readiness Check

After the completion of check and also if your installation covers all of the requirements, then you will be able to proceed by clicking on the Next button.

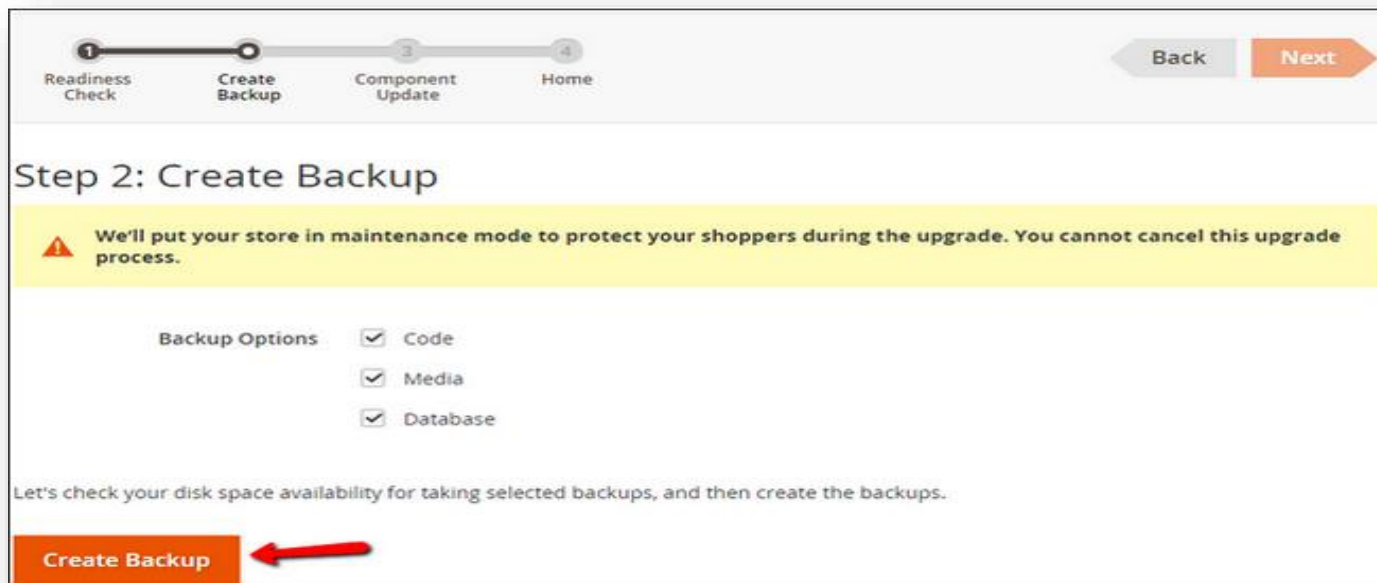

Need help ? We are expert

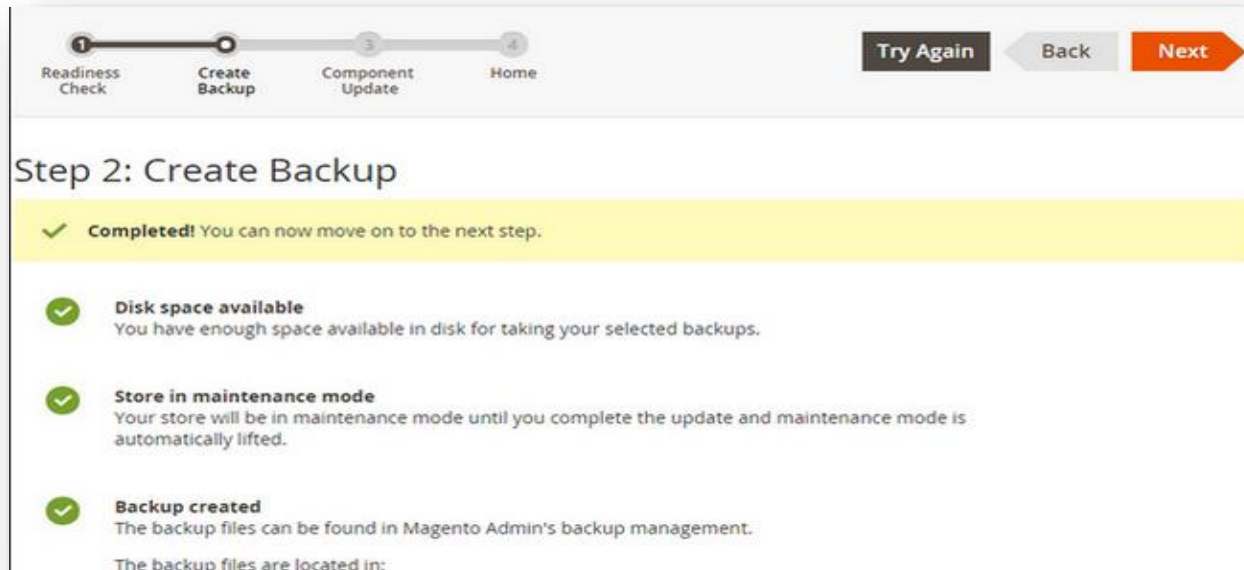

If you have any of the component marked as red, then you will be able to check how to fix the issues with it by just clicking on the link below it. This will proceed you to the Magento 2 official documentation section where you will find a guide on the matter.

Step 2 : Backup your Data

Now the second step which involves in creating a Backup on your Store .You can also de-select the backup options here if you had taken the backup of your data earlier and click on the Next button or click on Create Backup if you have selected an option.

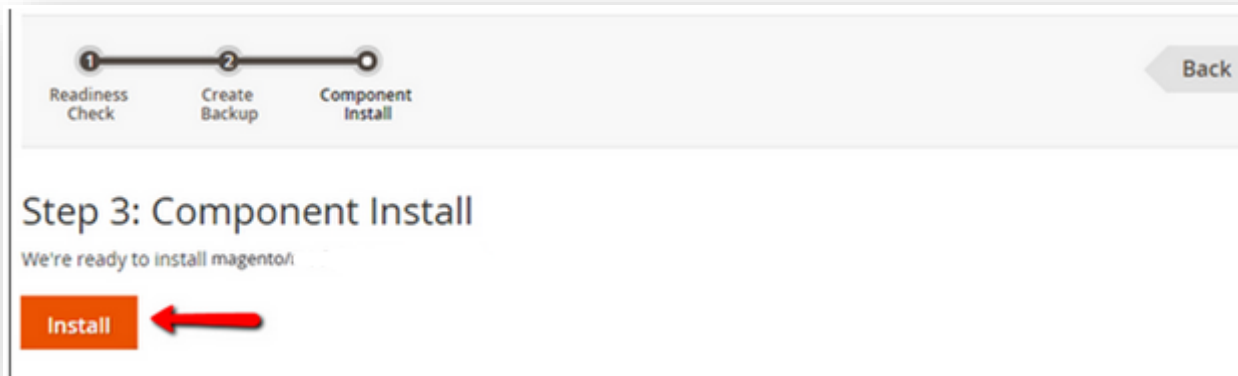

If you choose the latter, you will receive a confirmation screen that the backup has been successfully created and then you can move to the Next button to proceed.

Step 3 : Install the Extension

Finally the last step, where you will see again the extensions you wanted to install. Click on the Install button to continue.

Once the installation has been completed, you will receive a confirmation and the ability to go back by clicking on the **Back to Setup Tool** button.

This ends your installation process.
