

# **Installation guide**

For Magento 2 extension

**Extait** extensions are easy to install. All you need is to have FTP/SSH access details, and follow next steps.

We strongly recommend creating a backup of your website before the installation.

1. Upload or copy all folders in the zip package to your Magento site root folder. This will not overwrite any existing file; just add new files to the folder structure.
2. Navigate to System -> Web Setup Wizard -> Component Manager
3. Find uploaded extait/[module\_name] in the components list and select "Enable" action in the Actions column
4. Follow the instructions on your screen.
