Default: 5

**Dropbox**

Enabled [global] Yes

Create [app](#)  
Send your archived logs to Dropbox automatically.

Client ID [global] .....

Client Secret [global] .....

## General

Enabled [global] Yes

File max size [global] 10  
Specify file size in Mb. Log files exceeding the specified size will be archived.

Amount archives copies to keep [global] 5  
Default: 5

The main options include enabling/disabling the module, the maximum file size after which the module should archive the file, and the number of copies to keep. For the module to work correctly, you must have Cron configured.

# Cloud Storages

If you want to store archives of log files in the cloud storage, then use the integration with cloud services such as Dropbox, Google Drive, Microsoft OneDrive, etc. And then your log files will not take up space on your server.

## Dropbox

### Dropbox

<b>Enabled</b> [global]	<input type="text" value="Yes"/>	<input type="button" value="▼"/>
	<a href="#">Create app</a> Send your archived logs to Dropbox automatically.	
<b>Client ID</b> [global]	<input type="text" value="....."/>	
<b>Client Secret</b> [global]	<input type="text" value="....."/>	
<b>Authentication Code</b> [global]	<input type="text" value="....."/>	
	<a href="#">Link the Dropbox account</a> Get code and past it to field	

1. Create [Dropbox app](#)
2. Set Client ID and Client Secret to fields.
