1.About the Extension

If you want to create a feed on your **landing page or block**, Magento 2 Social Feed extension is a helpful tool for this purpose. It allows you to **create a social feed to any block or landing page**. This extension deals with adding different social feeds from social media applications like **Facebook, Twitter, and Instagram**. Increase your store revenue by adding different feeds for social media applications and showing a clearer picture of your products.

You as a store owner can also **customize landing pages, customize feed data and also customize button labels for social feeds**. Also, you can change the prefix and suffix of social feed landing pages of your websites.

2.Feature List

- Extract Feeds from Social Media Application (Facebook, Twitter, Instagram)
- Customize Landing Page Headings
- Customize Text for Landing Page
- Customize Feed Data
- Customize Button Label for Social Media Apps
- Change the Prefix and Suffix of Social Feed Landing Page
- Display Social Feed in Tabs
- Customize Blocks for CMS Pages

2.1 Extract feeds from the social media application

The primary purpose of the extension is to extract the social feeds from social media applications. In this extension, the main three social media applications are **Facebook, Twitter, and Instagram**.

2.1.1 Facebook Social Feed

For showing live updates of Facebook on the web page, user have to fill in some requirements to get a Facebook feed on the web page.

- Facebook Page User Id
- Facebook Access Token

2.1.2 Twitter Social Feed

For showing live updates of Twitter on the web page, User have to fill in some requirements to get a Twitter feed on the web page.

- Twitter Handler
- Consumer Key
- Consumer Secret Key
- Access Token Key
- Access Token Secret Key

2.1.3 Instagram Social Feed

For showing live updates of Instagram on the web page, User have to fill in some requirements to get an Instagram feed on the web page.

- App ID
- App Secret ID
- App Redirect Url
- Instagram Access Token

2.2 Customize Landing Page Headings

In the Social Feed extension, customized landing page headings have been created to set the **social feed headings** according to your requirement.

2.3 Customize Landing Page Text

In this extension, customized landing page text will be used for the social feeds text body where you have to write a complete detail about that feed.

2.4 Customize Feed Data

In this extension, users can customize feed data according to the caption, media, and date. Users can set the details as per the requirement of their feeds, which can be visible on the cms pages and the landing page.

2.5 Button label for Social Feeds

In this extension, there is a **load button** on the cms page. By clicking this button, more tiles are loaded without the page load.

2.6 Change the Prefix and Suffix of Social Feed Landing Page

This extension can **change the prefix and suffix** of the social feeds landing page according to your requirements.

2.7 Display Social Feed in Tabs

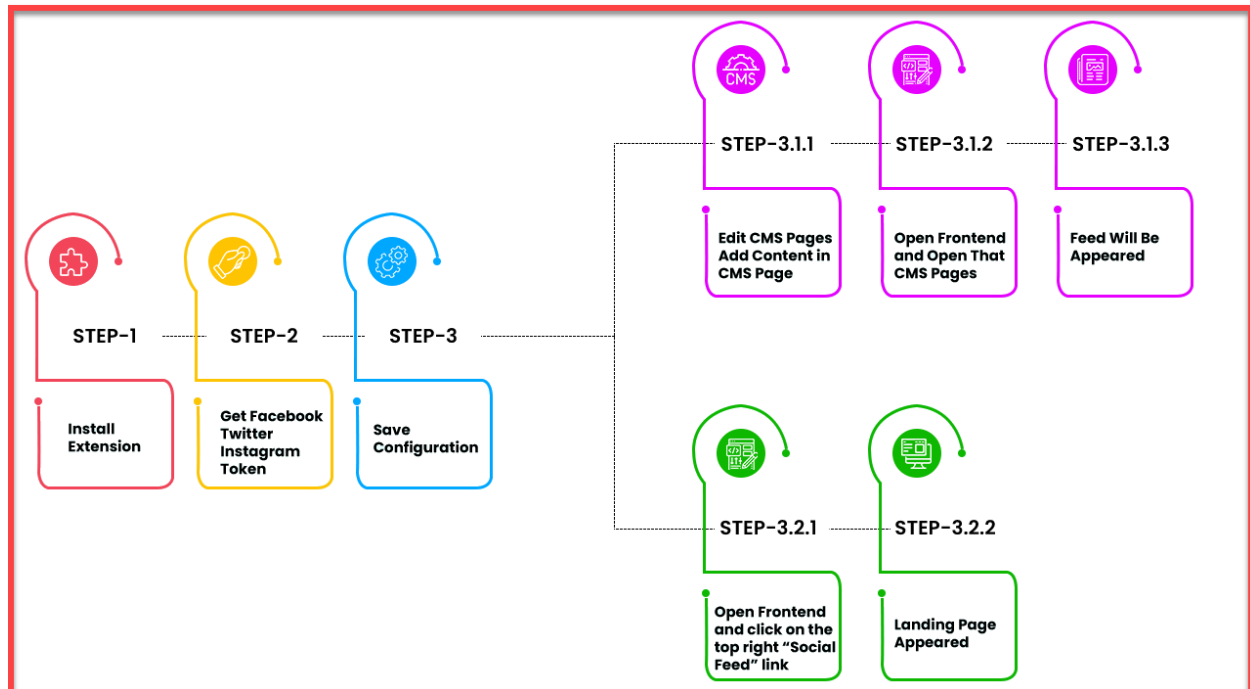

This extension provides a “Tab view”, In this feed Tiles of the different social sites are arranged.

2.8 Customize Blocks for CMS Pages

In the social feed extension, the customize blocks can be created for the cms pages to view the live feed from social media platforms in just a user’s single click. Users can customize their block which they want to be shown on the pages.

3.Steps to Follow

Step 1: Install the Extension - See the installation guide

Step 2: Get Tokens - Get tokens for your Facebook, Twitter, and Instagram accounts. Tutorial video links are given in sections 4.2, 4.3, 4.4.

Step 3: Save configurations - Click Save Config to save the configurations.

Step 3.1.1: Add Code to a CMS Page - Add the code in section 4.5 in any of the CMS pages to display social feed.

Step 3.1.2: Check the CMS Page on Frontend - Go to the CMS page on frontend and see if the feed appears.

Step 3.1.3: You will see the social feed on the CMS page .

Step 3.2.1: Check Landing Page on Frontend - Click on the Social Feed button on the top right to check social feed on your landing page.

Step 3.2.2: You will see the social feed on landing page.

4.5 Customize Blocks for Social Feed

For Social feed, the customized blocks will be created with the help of codings.

```
{{block class="FME\SocialFeed\Block\Socialfeedblock" no_tiles="5"  
enable_fb="0"enable_twitter="1" enable_insta="1"}}
```

- **no_tiles="5"**: It shows the number of tiles which will appear on the cms page.
- **enable_fb="0"enable_twitter="1" enable_insta="1"**

For customized feed, there are some rules which can be used. For showing the Feed of different social sites on the cms page. Users can set "0" to disable the feed and "1" to enable the feed.

For Example: In the above coding, this code specifies which social site would appear on the page screen and which will not. "0" indicates that the Facebook feed won't be visible to the user whereas, the rest of the code shows that Twitter and Instagram would be easily accessible for the user.

Save the Configurations

5. Store Front End
