

FPT Recommendation Module

Thank you for trying the FPT Recommendation module! This module will help you to improve your sales. This module will display relevant recommended products that make visitors interested, stay longer on your site and spend more.

To use the module you should sign up with us

<https://dashboard.knowlead.io/signup>

After signup an email will be sent to you with site ID and API key to enable the module.

Installing the module

You can install the module in any of the following ways:

1. By copying the code to your `<your Magento install dir>/app/code/<VendorName>/<ModuleName>` directory. This method requires some manual tasks but it easy.
2. Using `composer require`.

Installing the module by copying code

Any Magento module requires a particular directory structure under `<your Magento install dir>/app/code`.

The structure starts with: `<VendorName>/<ModuleName>`

The reference module requires the following structure: `FPTCorp/Recommendation`

To add the module to your Magento installation:

1. Log in to your Magento server as a user with privileges to write to the web server docroot (typically either the `root` user or the web server user).
2. Enter the following commands in the order shown:

```
$ cd <your Magento install dir>/app/code
```

```
$ mkdir -p FPTCorp/Recommendation
```

3. Go to the [reference module GitHub](#).
4. Click **Download Zip**.

5. Copy the .zip file you downloaded to your Magento server's `<magento install dir>/app/code/FPTCorp/Recommendation` directory.

6. Enter the following commands in the order shown:

```
$ unzip fptcorp_recommendation-master.zip
```

```
$ mv fptcorp_recommendation-master/* .
```

```
$ rm -rf fptcorp_recommendation-master
```

```
$ rm -f fptcorp_recommendation-master.zip
```

7. Open `<your Magento install dir>/app/etc/config.php` in a text editor.

8. Add the following anywhere under 'modules' => array (:

```
'FPTCorp_Recommendation' => 1
```

9. Save your changes and exit the text editor.

Installing the module using Composer

Enter the following command in the order show

```
$ cd <your Magento install dir>
```

```
$ composer require fptcorp/recommendation
```

```
$ bin/magento setup:upgrade
```

```
$ bin/magento cache:flush
```

Verifying the module

1. Log in to your Magento server as a user with root privileges.

2. Enter the following commands in the order shown to clear the Magento cache:

```
$ cd <your Magento install dir>/var
```

```
$ rm -rf cache page_cache
```

3. If you're currently logged in to the Magento Admin, log out.

4. Log in to the Magento Admin as an administrator.

5. Click **Stores > Configuration**

If **FPTCORP** tab displays you successfully installed the reference module!

To use the module you should register with us <https://dashboard.knowlead.io/signup> After signup an email will be sent to you with siteld and API_key to enable the module. Go to the FPTCorp tab, enter the enter the siteld and API_key as in the email. Save the config.

From the command line enter the following in the order show

```
$ cd <your Magento install dir>
```

```
$ bin/magento cache:flush
```

To see the reference module at work.

After visitors use the system for a while a list of recommended products will be displayed. That's it! You're done!
