General Settings

This guide will provide you with a comprehensive guide for setting all required module settings from within the Magento® 2 admin panel for the cookie compliance module.

All of the following settings can be found in your Magento® 2 store admin panel under:

Stores > Configuration > HelloBrave > Cookie Compliance

Enabling the Module

To enable the module, select 'Yes' in the **'Enable Module'** dropdown box.

The screenshot shows a configuration field for 'Enable Module' with a dropdown menu set to 'Yes'. Below the dropdown is a descriptive text: 'Enable / disable the HelloBrave Cookie Compliance module.'

Setting the Message

Set the banner message by inserting text into the **'Banner Message'** text field. This should be short and concise informing users that your website uses cookies in its operation. A good example for this message could be:

"This website requires cookies to provide all of its features. By using our website, you agree to our use of cookies".

The screenshot shows a text field for 'Banner Message' containing the text: 'This website requires cookies to provide all of its featu'.

Setting the More Information Link

The learn more link should be utilised to provide users with additional resource to learn more about your cookie policy. This would normally be a link to your privacy policy where cookie usage is explained.

Set the text to appear on the link, and the location of the additional information in the **'More Information Link Text'** and **'More Information Link URL'** respectively.

The screenshot shows two configuration fields. The first is 'More Information Link Text' with the value 'Learn more'. The second is 'More Information Link URL' with the value 'http://www.mymagentostore.com/privacy-policy'. Below the URL field is a descriptive text: 'The URL where the user will find more information regarding cookie usage. e.g: http://www.mymagentostore.com/privacy-policy'.

Setting the Hide Message Link

While it is a requirement to display the cookie notification to all users under EU law. It should be possible for users to hide the notification if they so wish. This improves your user experience and can be achieved by clicking on a hide message button.

Set the text which appears on the hide message button by using the **'Hide Message Link Text'** input field.

The screenshot shows a configuration field for 'Hide Message Link Text'. The label 'Hide Message Link Text' is on the left, with a smaller '[store view]' label below it. To the right is a text input box containing the text 'Hide this message'.

Setting the Link Separator

We have now made it easier to customise your notification bar directly from your stores configuration area. The "Link Separator" option allows you to define the text which is used to separate the banner message and each of the links.

The screenshot shows a configuration field for 'Link Separator'. The label 'Link Separator' is on the left, with a smaller '[store view]' label below it. To the right is a text input box containing the text '#'. Below the input box is a descriptive text: 'A separator which is used to separate the text and links.'

Setting Custom CSS

In order to change the style of your cookie notification bar we have added the option for you to define custom CSS directly from your stores configuration area. This CSS can be added under the "Custom CSS (Advanced)" text area.

The screenshot shows a configuration field for 'Custom CSS (Advanced)'. The label 'Custom CSS (Advanced)' is on the left, with a smaller '[store view]' label below it. To the right is a large, empty text area for entering CSS. Below the text area is a descriptive text: 'Add CSS to change the style of the notification bar.'

Support

Should you have any difficulty with the usage of this extension, or have any or issues you would like to raise with us please feel free to submit a support ticket by emailing support@hellobrave.com.

Thank you for choosing the HelloBrave Cookie Compliance for Magento® 2.x module.
