

Configuration Guide | **Croatian Language pack for Magento 2**

Provider | **Inchoo d.o.o., Osijek, Croatia**

MAGENTO WEBSITE DESIGN AND DEVELOPMENT

Life's too short to buy offline.

Installation Guide

Download the extension and unzip it.

Access your Magento2 server.

Copy the content of the unzipped folder (not the folder itself) into <Magento install dir>/app/i18n/inchoo/hr_hr/

Be sure to install the extension in the following path as it is a language pack and not a usual extension.

After installation run the following commands:

```
bin/magento setup:static-content:deploy
```

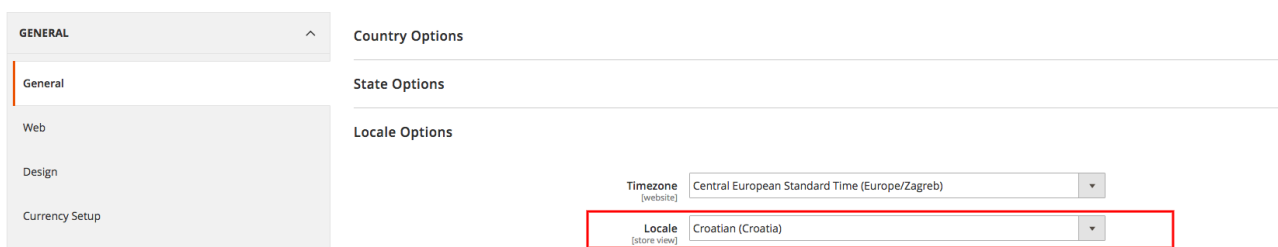

```
bin/magento setup:upgrade
```

Configuration Guide

After installation, the store needs to be configured to Croatian language.

- In order to **use the translations in the frontend**, follow these steps:

Go to *Admin dashboard* > choose *Stores* > then *Configuration* > stay in *General* > on the right side pick *Locale Options* > and change *Locale* to Croatian (Croatia)

The screenshot shows the Magento Admin Configuration page. On the left, there is a sidebar menu with the following items: GENERAL (expanded), General, Web, Design, and Currency Setup. The main content area is titled 'Country Options' and contains three sections: 'Country Options', 'State Options', and 'Locale Options'. Under 'Locale Options', there are two dropdown menus: 'Timezone [website]' set to 'Central European Standard Time (Europe/Zagreb)' and 'Locale [store view]' set to 'Croatian (Croatia)'. The 'Locale' dropdown is highlighted with a red rectangular box.

- If you want to **change Admin panel**, access your admin *Account settings* and change *Interface Locale* to Croatian (Croatia).
