

Magento Installation Guide

Introduction

Welcome to Katapult!

In this guide you will find the installation instructions for the Katapult plugin for Magento. Installation is 4 quick steps and should take less than 10 minutes to complete.

What materials are needed:

- Admin access to the stage environment where you intend to test Katapult as a payment option
- Katapult sandbox tokens, provided in the integration onboarding email.

What this installation doesn't do:

This guide will install Katapult as a payment option in your cart. You will still need to market Katapult on your page to increase program awareness and promote conversions. You will find a link to our merchandising guide and a few best practices for updating your Magento shop.

Installation

Step 1. Uncompress the archive on your computer

Step 2. Copy the files to the app/code folder of your Magento 2 installation.

Step 3. Open your terminal and go to the Magento 2 root. Run from there the following command:

```
php bin/magento setup:upgrade
```

Step 4. To configure go to Admin > Stores > Configuration > Sales > Payment Methods > Other Payment Options – Katapult

- Enable payment method
- Enable Test Mode
- Enable log
- Test Public & Private token – provided to you in onboarding email.
- Use Test JS Domain <https://sandbox.katapult.com/>

Leasable

Leasable and Non leasable items

We ask that our merchants mark the appropriate items as leasable during setup. We still allow customers to checkout with leasable and non leasable items. However they must pay for non leasable items in full at the time of checkout, don't worry we'll take care of the taxes and the payment. For this to happen you must update your product attributes as leasable.

Not sure which items are leasable? Look at our merchant guide of a list of non leasable items or reach out to us directly at integrations@katapult.com.

Updating Attributes

To update items as leasable go to Catalog > Products > find the product(s) that is leasable > go to edit > Find 'Leasable with Zibby' > change to yes - save

Testing

Merchant Testing

We recommend that your team completes thorough testing. You can find our recommended testing scenarios [here](#). However, you will need to tailor your testing plan specific to your setup and processes.

Katapult Testing

After completing the installation and configuration, we will coordinate testing with your team. Katapult will need to complete testing in your development environment before going live in production.

You can find testing credentials and requirements on our [Developer Portal](#)

Deployment

Once testing is completed, we will coordinate training and a go live date. Contact your account manager or reach out to integration@katapult.com to coordinate a go live date.

Production Configuration

Once testing is completed Katapult will coordinate providing production tokens and deployment.

- Disable Test Mode
- Enable log
- Live Public Token: Tokens supplied by Katapult
- Live Private Token: Tokens supplied by Katapult
- Use Production JS Domain www.katapult.com
- Minimum order amount allowed: Value provided in your integration onboarding email

Preapproval

Now that you've installed Katapult as a payment option on your stage site, its time to get a few merchandising resources placed! Please let us know if you need any assistance with adding your preapproval buttons.
