

Installation Guide

1) Prepare the File Structure

Create 'Lachestry' folder according to the path app/code/Lachestry

Inside 'Lachestry' folder you should create a folder with the name 'Bestsellers'. Paste the files you unpacked in the last step there.

In Magento 2, extension files are placed in one module folder so there is no need to copy files to different directories like it used to be in Magento 1.

2) Extension Installation

Open the console and type the following commands:

- a. `php bin/magento module:enable Lachestry_Bestsellers`
- b. `php bin/magento setup:upgrade`
- c. For Magento 2.2.x, 2.3.x: `rm -rf generated/*`
- d. `php bin/magento setup:di:compile`
- e. `php bin/magento setup:static-content:deploy`

3) Check if the Extension is Enabled

To check the list of enabled modules, you can either:

Run the command `"php bin/magento module:status"` in the console command.

Or check manually in `"app/etc/config.php"` file.

4) Flush the Magento Cache

The last thing that you need to do is to flush Magento cache. You can do this in two ways: Running in console command the command `'php bin/magento cache:clean'`:

```
php bin/magento cache:clean
```

In the Admin Panel, heading to **System** → **Cache Management**, then selecting all elements and clicking 'Flush Magento Cache'.

5) Extension's Settings

Some extensions can be enabled or disabled from their settings menu as well. They are set Enabled by default.

You can check this status in the following path:

Admin Panel → Stores → Configuration → Extension name → Configuration → General
