

Migrate from VirtueMart

The essence of LitExtension products focuses on their friendliness to users, which means that every shopping cart owners, even who has little knowledge of technology, can follow guidance and migrate data from Virtuemart to Magento easily. You are advised that need not to consult any other sources except this understandable step-by-step guide below.

1. Preparation

- Permission to upload files to Virtuemart store
- Permission for Magento to access connector
- PHP Compatibility: PHP 5.3 or later

2. Setup

2.1. Download Migration Tool

After downloading the product zip file from our Store, please extract it into a folder.

2.2. Install Cart Migration

Target Magento Data Migration Module Setup

For Magento 1.x

- **Step 1:** Check to see if **Magento's Compilation mode** has been enabled. If it has, it's vital to turn it off before installing an extension or making any code changes (go to **System > Tools > Compilation**).
- **Step 2:** Use upload file by FTP or uploaded directly to upload or copy all folders in the zip package to your Magento site root folder. This will not overwrite any existing files, just add new files to the folder structure.
- **Step 3:** If you are using Magento's compilation mode, you need to hit the "**Run Compilation Process**" button to update the compiled state with the newly installed extension (go to **System > Tools > Compilation**).
- **Step 4:** Log into your Magento admin console and go to **System/Cache Management**. Click "**Clear Storage Cache**".
- **Step 5:** Log out admin panel and log in again (this is a normal behavior of Magento).

For Magento 2.x

- **Step 1:** Access to Magento store by using FTP program and upload '**Apps**' folder to Magento root folder.
- **Step 2:** In SSH console of your server navigate to your store root folder:

```
cd path_to_the_store_root_folder
```

run these commands:

```
php -f bin/magento module:enable LitExtension_Core
```

```
php -f bin/magento module:enable LitExtension_CartMigration
```

```
php -f bin/magento setup:upgrade
```

```
php -f bin/magento setup:static-content:deploy
```

- **Step 3:** Flush store cache; log out from the backend and log in again.
- **Step 4:** Allow Admin Account Sharing, to ensure the migration progress will not be stopped when you login Admin from another place. Please go to **Backend > Stores > Configuration > Advaced Tab > Admin > Admin Account Sharing** change to “YES”.

2.3 Install Connector for Virtuemart

- **Step 1:** Access to Virtuemart store by using FTP program
- **Step 2:** Upload the folder ‘Magento_connector’ to Virtuemart Virtuemart root folder
- **Step 3:** Test the connector by accessing [http\(s\)://yourstore.com/magento_connector/connector.php](http(s)://yourstore.com/magento_connector/connector.php). Connector is set up successfully if getting message “Connector installed”.
- **Step 4:** For security, open connector.php in ‘connector’ folder, find this very first line: `define(‘LECM_TOKEN’, ‘123456’);` And change “123456” to another string which used to enter to the Migration Form (Cart Token) and acts like “password” to prevent unauthorized data access to your source store.

3. Enter license key

License Key is an encoded string which comes with your download package. This key is needed to activate your Migration Tool.

After purchasing the product, please login to our store and enter “My downloadable products” section. Here you will find download link and license key for the download package.

My Downloadable Products

1 Item(s)			Show 10 per page

4. Migration

4.1 Virtuemart setup

Fulfill information in the setup table:

Cart Migration 1. This is demo migration therefore we limit the number of entities which can be migrated of Product, Category, Customer, Order to 10 as well as disable some sensitive options.

2. You have full privileges to delete your migrated data on this demo magento store, for any confidential reasons.

3. If by some case the module does not work as expected with your Source Store, we can help you fix that, please "contact us" to let us know your case, thank you!

Source Cart Setup

Cart Type: *

Cart Uri: *
Please enter correct Source Cart Uri as it will be registered as the migration domain.

Cart Token: *

Next >

Cart Migration by LIExtension ver 2.4.1

- Cart URL: Your Virtuemart URL
- Token: The token string which has been configured in connector.php

4.2 Migration Configuration

Configuration

Root Category

Choose a Category to put migrated categories from Source Cart into.

Root Category: *

Product Attribute Set

Choose an appropriate Product Attribute Set or just leave it Default.

Attribute Set: *

Languages Mapping

If your Source Cart is multilingual, corresponding languages (or storeviews) should be available in Target Magento Store. You may need to create additional languages in Magento Store to avoid data loss.

Default Language

Currencies Mapping

Please assign Source Cart currencies to proper Target Magento Store currencies. Creating currencies in Target Magento Store may be needed.

GBP

Orders Status Mapping

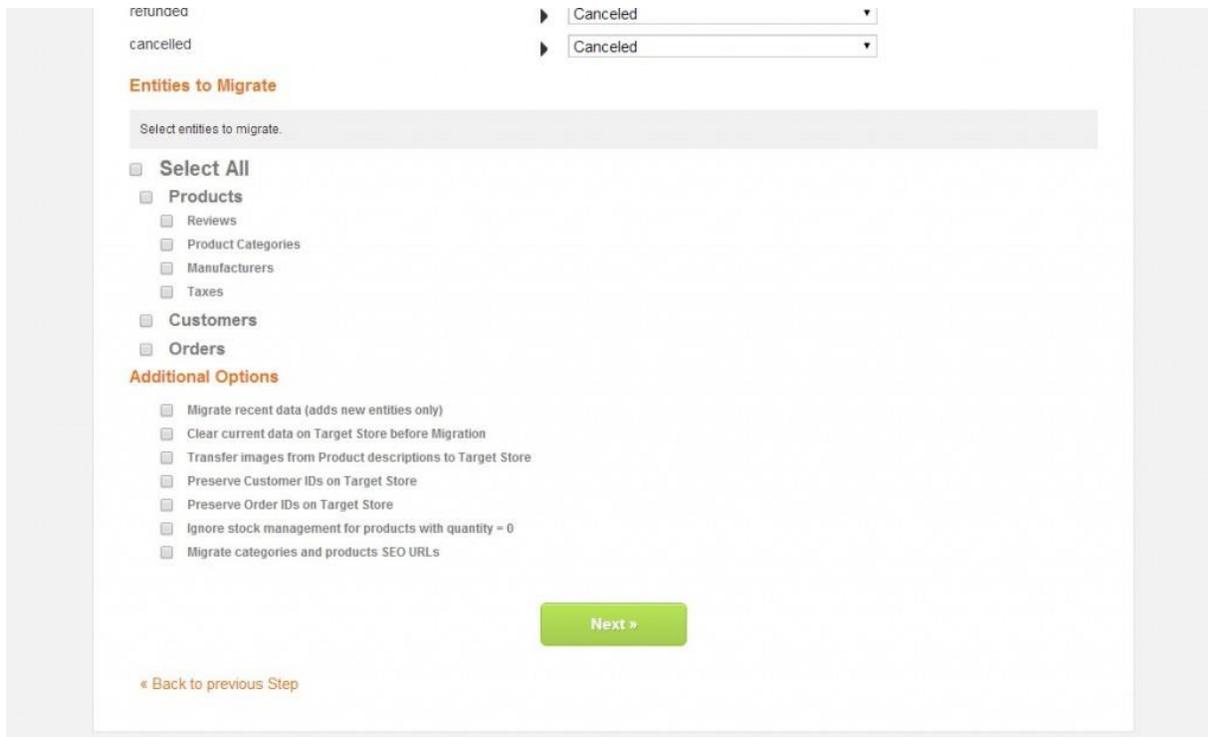

Please assign Source Cart order statuses to proper Target Magento Store order statuses. Creating additional order statuses in Target Magento Store may be needed.

pending

failed

on-hold

- **Root Category:** the category of current Magento store to import all Virtuemart categories into.
- **Product Attribute Set:** select an Attribute Set which is used to import products, all necessary attributes in migration process will be created in to this set.
- **Languages Mapping:** If your Virtuemart is multilingual, corresponding languages (or storeviews) should be available in Target Magento Store. You may need to create additional languages in Magento Store to avoid data loss.
- **Currencies Mapping:** Assign Virtuemart currencies to proper Target Magento Store currencies. Creating currencies in Target Magento Store may be needed.
- **Orders Status Mapping:** Assign Virtuemart order statuses to proper Target Magento Store order statuses. Creating additional order statues in Target Magento Store may be needed.
- **Entities to Migrate:** select all entities to migrate or just a part of them.

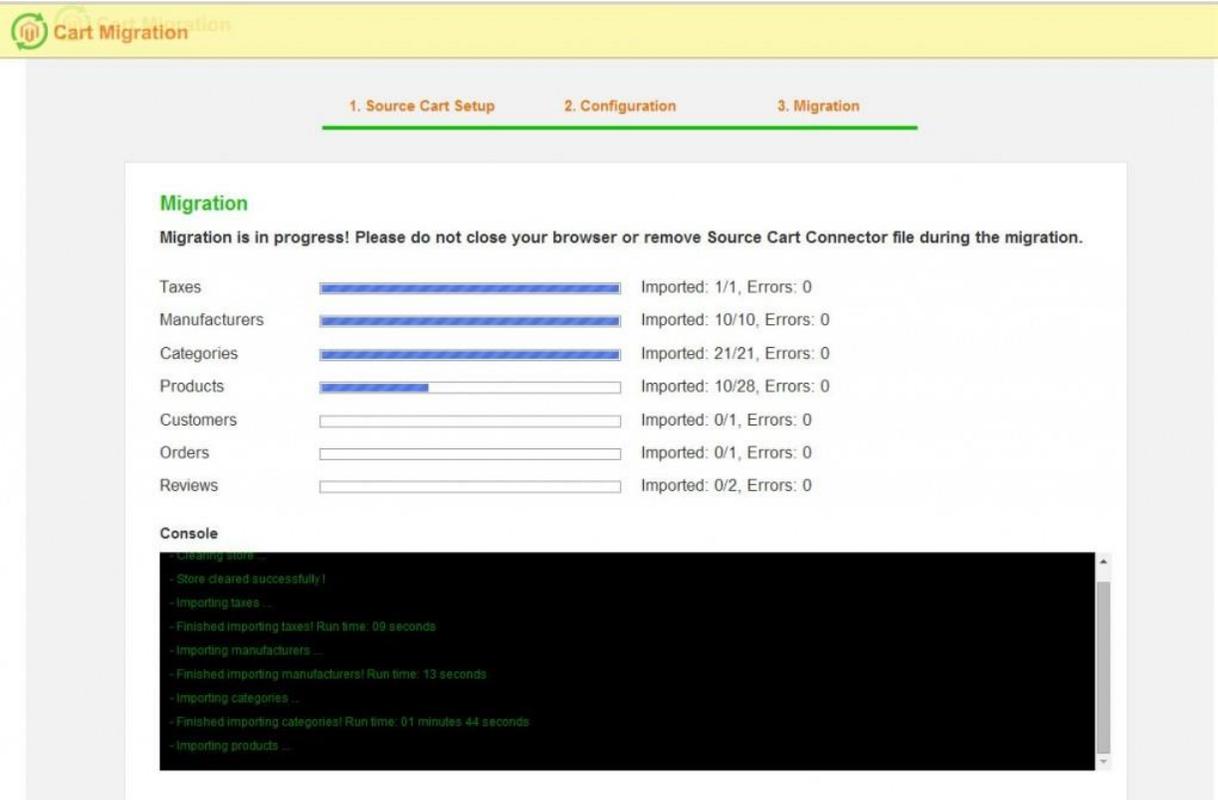

Additional Options:

- ***Migrate recent data:*** if you choose this option, it will migrate new data only. Supposed you have just finished a full migration from your current Virtuemart to Magento, after that Virtuemart store is still live and continue getting new data, and you want to get your Magento updated with the new data, select this feature to avoid starting over again.
- ***Clear current data on Target Store before Migration:*** if you choose this option, all current products, categories, manufacturers, customers, orders, product reviews, taxes will be cleared.
- ***Migrate categories and products SEO URLs:*** if you choose this option, old SEO urls of source will be preserved in Target Magento Store, allowing you to maintain your Pagerank.
- ***Transfer images in product descriptions to Target Store:*** download all images in product description into your store so that it won't have to refer back to your Virtuemart or anywhere else for images.
- ***Preserve Customer IDs on Target Store:*** this will help you preserve your old Customer IDs for easier reference.
- ***Preserve Order IDs on Target Store:*** this will help you preserve your old Order IDs for easier reference.

4.3 Migration

The migration will take place automatically in this final step. In order for it to progress, you should not close your browser or remove Source Cart Connector.

After the migration is completed, click on “Clear Cache and ReIndex Data” to finish.

That's all about migration process which can be carried out yourselves. Technical knowledge and skills are not necessary to use LitExtension shopping cart migration tools. Hope that with this detailed guide and attached video, online store owners don't hesitate to try our live demo and decide to use our [Virtuemart to Magento migration tool](#)– optimized solution for your online business.
