### Introduction:

This module allows you to import and export your store URL rewrites data such as store view id, request path, target path, redirect type and description in bulk via csv format. This extension allows you to import export all the Magento's URL rewrites data from one store to another store. You can export store view and URL type like custom, category, product and cms page URL wise URL Rewrites data.

### Features of this extension:

- ⇒ Import/Export all URL redirect type like No, Temporary (302) and Permanent (301).
- ⇒ Import/Export all URL type like custom, category, product and CMS page.
- ⇒ Import/Export files via Magento admin/browser. No need for FTP access.
- ⇒ You can export store view and URL type like custom, category, product and CMS page URL wise URL rewrites data.
- ⇒ Support multi store and multi website.
- ⇒ Supported Magento Community **2.0, 2.1, 2.2**

## How to create CSV?

The screenshot shows the 'Create URL Rewrite' form in Magento2. At the top right, there are 'Back' and 'Save' buttons. The form is titled 'Create URL Rewrite' and has a dropdown menu set to 'Custom'. Below this, the 'entity\_type' field is highlighted with a red box. Under the 'URL Rewrite Information' section, there are several fields: 'Store' (set to 'Default Store View') with a 'store\_id' label; 'Request Path' with a 'request\_path' label; 'Target Path' with a 'target\_path' label; 'Redirect Type' (set to 'No') with a 'redirect\_type' label; and 'Description' with a 'description' label. All labels are in red text.

**entity\_type** - Set the entity type.

Custom – custom

For Category – category

For Product - product

For CMS Page - cms-page

**entity\_id** - If you set entity type is category, product or CMS page then here you can set here entity id like category id, product id or CMS page is as per your requirement.

**request\_path** - Set the relative path of the page to be redirected.

**target\_path** - Set the valid URL of an existing page that will be the new destination.

**redirect\_type** - Set redirect type URL.

No – 0

Temporary (302) – 302

Permanent (301) - 301

**store\_id** - Set the store view id. You can enter existing store view id.

**description** - Set the description.

## Sample Import URL Rewrites CSV

Go to <https://www.magebees.com/import-export-url-rewrites-extension-for-magento-2.html>

Go to **support** tab and download “**Import-export-url-rewrites-sample-csv**” file.

**import\_all\_url\_type.csv** – Using this CSV you can import all URL type like custom, category, product and CMS page.

**import\_custom\_url\_type.csv** – Using this CSV you can import custom URL type.

**import\_custom\_url\_type\_min\_field\_301.csv** – Using this CSV you can import custom URL with 301 redirect URL.

## How to Import URL Rewrites?

You must have to follow below steps:

### Step-1

Prepare your CSV as per our documentation. For more detail see (How to create CSV? or refer sample CSV). Create new “**something.csv**” File.

**Note: - Do Not Change CSV header.**

### Step-2

Go to **Your Site Backend -> SYSTEM -> MageBees – Import/Export URL Rewrites -> Import URL Rewrites.**

Import URL Rewrites

Make sure that data encoding in the file is consistent and saved in CSV (comma separated only) with supported encodings (UTF-8 or ANSI).

Note: Before import the URL rewrites please refer sample csv files.

Select File for Import  No file selected.

### Step-3

Please upload your created CSV file and click on “**Import URL Rewrites**” button.

**Note: Please do not close this screen before completing process. It will lead undesired results if you closed before complete the process.**

### Step-4

Now successfully import URL Rewrites.

Your store **URL Rewrites** will be display on **Admin -> MARKETING -> SEO & Search -> URL Rewrites.**

## How to Export URL Rewrites?

You must have to follow below steps:

### **Step-1**

Go to **Your Site Backend** -> **SYSTEM** -> **MageBees – Import/Export URL Rewrites** -> **Export URL Rewrites**.

Export URL Rewrites 🔍 🔔 👤 admin ▾

**i** Note : Exported file will be save in **var/export** directory.

Store View  ▾

301 URL Only  ▾

Exported URL Type  ▾

### **Step-2**

Select store view then click on “**Export URL Rewrites**” Button.

### **Step-3**

Now successfully export URL Rewrites.

You can get exported CSV file in **<Magento-Root>/var/export/ file**

## FAQ:-

**Below is the detail explanation:**

Q-1:- I have installed import export URL rewrites extension but got following error. "There has been an error processing your request". **"Please upgrade your database: Run bin/magento setup:upgrade"**.

- ⇒ Run **"php bin/magento setup:upgrade"** command to your terminal or command prompt. Please see installation steps for that. [Click Here](#)

Q-2:- I am getting max execution time error, what I have to do?

- ⇒ If you getting time out then increase your time our limit. For that you have to consult you hosting guy.

Q-3:- I am getting "'var/export' directory does not exist!" error?

- ⇒ This error comes due to "var/export" directory does not exists or not having write permission.

# Thank you!
