

Language Translator / Multilingual Extension for Magento 2

Language Translator / Multilingual Extension is a comprehensive solution that saves you from buying different modules required to get different language packs for building a multilingual Magento website. Using this single extension, you can easily create '100+' language packs that helps your Magento website quickly reach a globally targeted audience.

Features:

1. Easily manage Language Translator Settings from Admin Panel -
 - Enter the character translation limit
 - Enable / disable content translation using google API - This is useful in cases when you might have missed translating any content from admin side.
 - Enable / disable cron for mass translations.
2. Special Variables: You can add special variables for which translation needs to be avoided. For ex: website's name, description etc.
3. Bulk Translation: Helps you translate content like products, CMS Pages, Blocks, etc in bulk saving you a lot of time & effort.
4. Inbuilt Language Manager: Helps you search for any phrase in any language and then translate or edit it.
5. Add Phrases: Option to add & translate custom phrases which are not present in any module's file.
6. Translate product details, reviews and categories from one language into another.
7. View Mass Translation Status through Manage Cron section.
8. Offers 100+ languages for translation.

Installation:

The complete process of installation of the extension on Magento would be:

1. Download the extension from your account

2. Unzip the file
3. Create a folder {Magento 2 root}/app/code
4. Copy the content from the unzipped folder

Module Configuration:

Once the extension has been installed you will have to configure it from Magento backend admin panel by entering the relevant details, i.e. License Key, Google API Key and Google API character translation limit. You can also do a few more things:

1. Enable / Disable content translation using Google API.
2. Enable / Disable Cron for mass translations.
3. Add special variables which you do not want to be translated, for example: your site's name, email signature, etc.

The screenshot displays the 'Configuration Settings' page for the 'Translator' module. On the left, a sidebar menu lists various modules, with 'Translator' selected. The main content area contains the following configuration fields:

- Enter License key** [store view]: A text input field containing 'XXXXXXXX-XXXXXX-XXXXXX'. A red callout box points to it with the text 'Enter your License key'.
- Enter Google API KEY** [store view]: A text input field containing 'AlzaSyAxS_vCPC7bYyHg26nOumBWBcU7rRTTC'. A red callout box points to it with the text 'Enter your Google API key'.
- Character Limit** [store view]: A text input field containing '100000'. A red callout box points to it with the text 'Enter Character Limit'.
- Content Translation** [store view]: A dropdown menu set to 'No'. Below it, a note asks: 'Do you want to enable content translation on your website? Selecting 'Yes' will translate all the content of website for users using google API on the selected...'

A 'Save Config' button is located in the top right corner of the configuration area.

Translation Settings:

You can also control the translations settings here, i.e. choose the text for translate button, select the product attributes, block fields, review fields, etc. that you want to be translated.
