

# **Diamond Search**

for Magento® 2

## **User Guide**

V 2.0.17

# 1. Configuration

To enable module, go to “**Stores -> Configuration -> Mageinn -> Diamonds Search**”.

There are 6 settings:

- **Enable Module** – switches module on/off
- **Source** – `Local` mode or `RapNet` service. For quick demo mode use `Demo`
- **API Key (RapNet)** – Get your API Key from <http://technet.rapaport.com/ProgrammaticAccess/Keys.aspx>

*The following key works only “localhost” domain:  
8EC95570ABE6411290197CB28845A6FF*

*Please note - “localhost” means domain. Not IP-address like “127.0.0.1”, not other domain matched to local IP, “localhost” means domain. So this test API-key used only for local site running via “<http://localhost>”. Not for “<http://127.0.0.1>”, not for “<http://my-domain-resolved-to-local-ip.tld>”, only for “<http://localhost>”*

- **Theme Color** – Main color for your theme
- **Diamond Image Type** – You can either choose either schematic or photo type.
- **Settings Attribute Set** – Please specify your settings attribute set, these are the products that will be shown in the ring builder under “Choose a Setting” step.

Set the above fields and click “Save Config” button to save configuration.

**Expand filters** [store view] Yes ∨  Use system value  
Expand widget filters by default

### Module Configuration Screen

You can also configure the **Widget Filters Settings** if your **Source** is set to **Local**.

## 2. Add static block

You can optionally add a static block to your CMS Home Page. The block will link to the "Ring Builder" page. In order to do so please add the following code:

```
{{block class="Magento\Cms\Block\Block" block_id="ring_builder_intro"}}
```

## Home Page

### DESIGN YOUR OWN ENGAGEMENT RING

Design your engagement ring your way. Start with a ring setting and then add the perfect center stone - or vice versa. It's really up to you!

or

*Static Block places on the Home Page*

### 3. Ring Builder

Ring Builder is a great tool to allow your customers to pair any diamond with setting of their choice. Ring builder is fully responsive. You can also define a filter for each setting, so that only compatible diamonds are shown when setting is selected:

---

## Settings Details

**Size From**  
[global]

**Size To**  
[global]

**Shape**  
[store view]

- Round
- Princess
- Emerald
- Asscher
- Cushion Brilliant
- Radiant

---

## Downloadable Information

---

### *Product Edit Scree - Set diamond filters*

**Size From** - Specify the minimum diamond size for the setting

**Size To** - Specify the maximum diamond size for the setting

**Shape** - Select what shapes are compatible with the setting (Multiselect)

Once settings are configured you can navigate to **[http\(s\)://your\\_store\\_url/diamondsearch/](http(s)://your_store_url/diamondsearch/)** or simply click on the relevant buttons on the home rendered from the static block added earlier.

Once navigated, you can see the following screens:

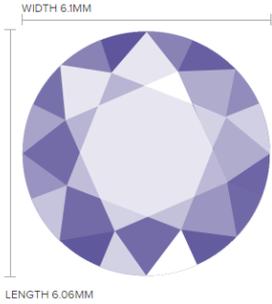

1 CHOOSE A DIAMOND  \$803.00 [View](#) | [Remove](#)
2 CHOOSE A SETTING  \$1,590.00 [View](#) | [Remove](#)
3 REVIEW COMPLETE RING

#### Summary

**Your selection:**  
1 x 1.01-Carat Radiant Diamond  
1 x 14K White Gold Therese Engagement Ring

The last step shows a dynamically created bundle product which is made of selected diamond and selected setting. Please note if your setting product has some custom options then those will be copied over to the newly created bundle product and your customers can select those options on this screen.

#### **4. RapNet Mode**

RapNet brings millions of dollars in diamond product to your Magento store, without the cost of owning the physical diamonds. All diamonds and attributes should be configured directly from RapNet admin panel. <https://www.rapnet.com/>

## 5. Local Mode

When mode is set to local you can create your diamond products directly from Magento admin. All you need to do is to assign “Diamonds” attribute set to your diamond products and fill in the following attributes:

### 1.17-Carat Princess Diamond

[← Back to register or connect an account](#)

Diamond ID <small>[global]</small>	<input type="text" value="86842473"/>
Shape <small>[global]</small>	<input type="text" value="Princess"/>
Size <small>[global]</small>	<input type="text" value="1.17"/>
Color <small>[global]</small>	<input type="text" value="J"/>
Fancy Color Dominant Color <small>[global]</small>	<input type="text"/>
Fancy Color Secondary Color <small>[global]</small>	<input type="text"/>
Fancy Color Overtone <small>[global]</small>	<input type="text"/>
Fancy Color Intensity <small>[global]</small>	<input type="text"/>
Clarity <small>[global]</small>	<input type="text" value="I1"/>
Cut <small>[global]</small>	<input type="text"/>
Symmetry <small>[global]</small>	<input type="text" value="Very Good"/>
Polish	<input type="text" value="Very Good"/>

*Product Edit Screen -Diamond creation in “Local” mode*

The module shipped with a console command used to create 10 test diamonds. The command is “**php bin/magento mageinn:diamondsearch:create-diamonds**”

## **6. FAQ**

**Q:** How can I change the price setting so I can show diamond prices in my local currency?

**A:** Currency code can be changed under module settings, however it's only possible to do so in "**Local**" mode. For the "**RapNet**" mode, all the settings are received directly from **RapNet**.

## **7. Enjoy It**

If you have any issues with the configuration or the module itself, please raise a support ticket here:

<https://mageinn.atlassian.net/servicedesk/customer/portal/1>

## **Changelog**

### **2.0.6:**

- Added the ability to specify diamonds and rings as paired in "Local" mode. Filter by paired option. Enable/disable setting for filter by paired in module configuration

### **2.0.5:**

- Added ACL for module configuration in admin panel
