

Additional Customer Emails

Does your customer need notification to additional email addresses when receiving Orders, Invoices, Shipments and Credit Memos? This extension for Magento Open Source allows your customer to enter additional email addresses for notification when transactional emails are sent. When your customer enters their new email address, they can choose which emails they wish to receive.

This extension for Magento Open Source is especially useful for wholesale merchants when their customers require emails to different departments, such as "warehouse email" for Shipments and "accounting email" for Invoices and Credit Memos.

Configuration

You can modify your settings for this shipping method in the system configuration.

System > Configuration > MageMaclean Extensions > Additional Emails

Enabled

You can enable or disable this module for each website independently.

Frontend Enabled

Enable if you want your customers to have access to manage their own additional email addresses from their customer account in the front-end.

Usage

Frontend:

Customer account menu will show a new link for "Additional Emails" where they can manage their additional email addresses. Transaction emails such as Orders, Invoices, Shipments and Credit Memos will be copied to the selected choices for each additional email address.

Admin:

Admin users can manage the additional emails from the customer account edit section. A new tab will be available to add, edit or delete the additional email addresses and select which transactions that email address should receive.
