

1. Google Map List And Store Locator Installation Guides

Here we will guide you through the installation process of our extension. First off, open FileZilla, log in to your host as follows:

In the above example we switched the local site to the extension directory, and the remote site to the code directory. Now on the remote site window, inside app/code directory, create a folder named Magenest and go inside it. Now on your local site window, right click on Extension Name and click Upload. The extension will be uploaded onto your host in a few minutes.

The second method will require you to compress the extension into .zip or .tar.gz format, then execute the following command in your Command Line/Terminal:

```
scp <path to your extension> <ssh server>:<path to Magenest directory>
```

Then log into your ssh server, go to Magenest directory and execute the following command to decompress the module:

```
unzip <.zip compressed extension>
```

Or

```
tar -xvzf <.tar.gz compressed extension>
```

Now go to your Magento root directory, say it's named magento2, and execute the following commands:

```
php bin/magento setup:upgrade
```

```
php bin/magento setup:static-content:deploy
```

After running all these, your Command line/Terminal window might look like this:

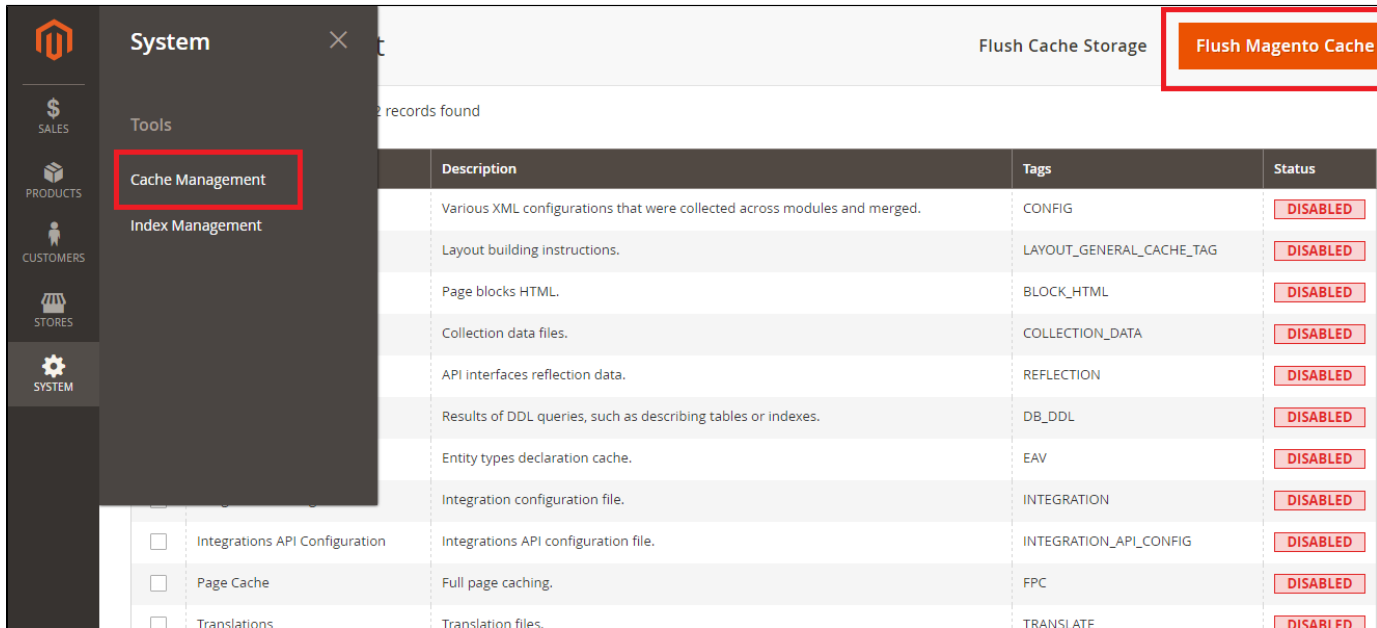

```
Module 'Magento_BundleSampleData':
Module 'Magento_Rss':
Module 'Magento_DownloadableSampleData':
Module 'Magento_Captcha':
Module 'Magento_OfflineShippingSampleData':
Module 'Magento_ConfigurableSampleData':
Module 'Magento_SalesSampleData':
Module 'Magento_ThemeSampleData':
Module 'Magento_ProductLinksSampleData':
Module 'Magento_ReviewSampleData':
Module 'Magento_SendFriend':
Module 'Magento_Ui':
Module 'Magento_Sitemap':
Module 'Magento_Authorizenet':
Module 'Magento_Swagger':
Module 'Magento_Swatches':
Module 'Magento_SwatchesSampleData':
Module 'Magento_CatalogRuleSampleData':
Module 'Magento_TaxImportExport':
Module 'Magento_TaxSampleData':
Module 'Magento_CatalogRuleConfigurable':
Module 'Magento_CmsSampleData':
Module 'Magento_Translation':
Module 'Magento_Shipping':
Module 'Magento_Ups':
Module 'Magento_UrlRewrite':
Module 'Magento_GroupedProductSampleData':
Module 'Magento_Usps':
Module 'Magento_Variable':
Module 'Magento_Version':
Module 'Magento_Webapi':
Module 'Magento_SalesRuleSampleData':
Module 'Magento_CatalogWidget':
Module 'Magento_WidgetSampleData':
Module 'Magento_Wishlist':
Module 'Magento_WishlistSampleData':
Please re-run Magento compile command
[root@centos-2gb-sgp1-01 magento2]# sudo chmod -R 777 var pub
[root@centos-2gb-sgp1-01 magento2]#
```

Finally, you need to flush the cache by either type this into the Command Line/Terminal:

```
php bin/magento cache:flush
```

Or go to System > Cache Management. Click the following buttons to completely clear the store cache:

- 1. Flush Magento Cache
- 2. Flush Cache Storage
- 3. Flush Catalog Images Cache
- 4. Flush JavaScript/CSS Cache

Now you can go to your store and check if the extension is working as expected.
