

Magento 2 Booking Online Pro Installation Guide

Installation Of Magetop

1. Overview

This is the Magento bookings plugin which is a simple way to enable scheduling and reservations on your e-commerce website. You can use this extension to create a new type of product and offer a time or date-based reservation feature right from your website

With regard to the period, you can offer specific time slots or allow the customers to choose their most convenient time. You can filter the booked slots and update your availability from the admin dashboard.

As the standard Magento Extension, you can easily install and set up a Booking online Pro module for Magento Ecommerce.

Magento 2 Booking Online Pro provide for type of booking bellow:

- Per-day
- Per-Night
- Per-hour
- Per-time

2. Installation

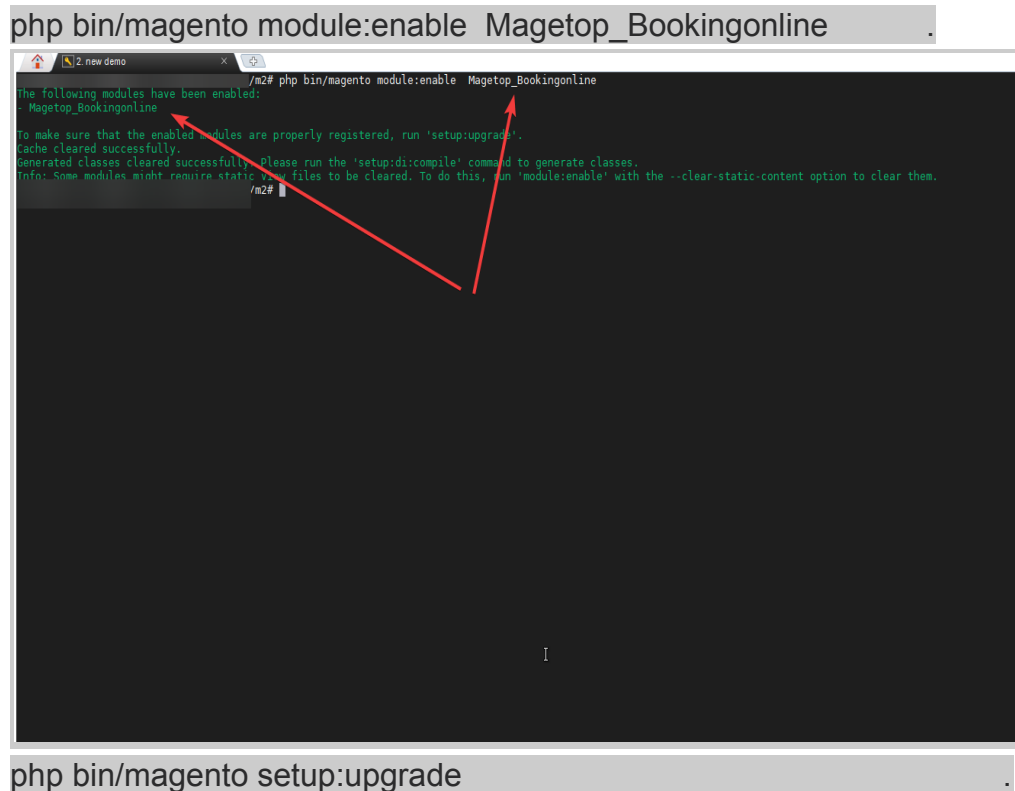

As a standard Magento extension, you can easily install it. You should prepare something like , Magento site, Backend , FTP, and SSH info .

Step 1 : you can extra file magetop_bookingonline_v2.6.8.zip and upload all code in our extension to Magento root folder. you can use some connect server software to upload code , Fileliza this good software you can use .

This is a standard Magento extension so you don't worry it will overwrite your current files .

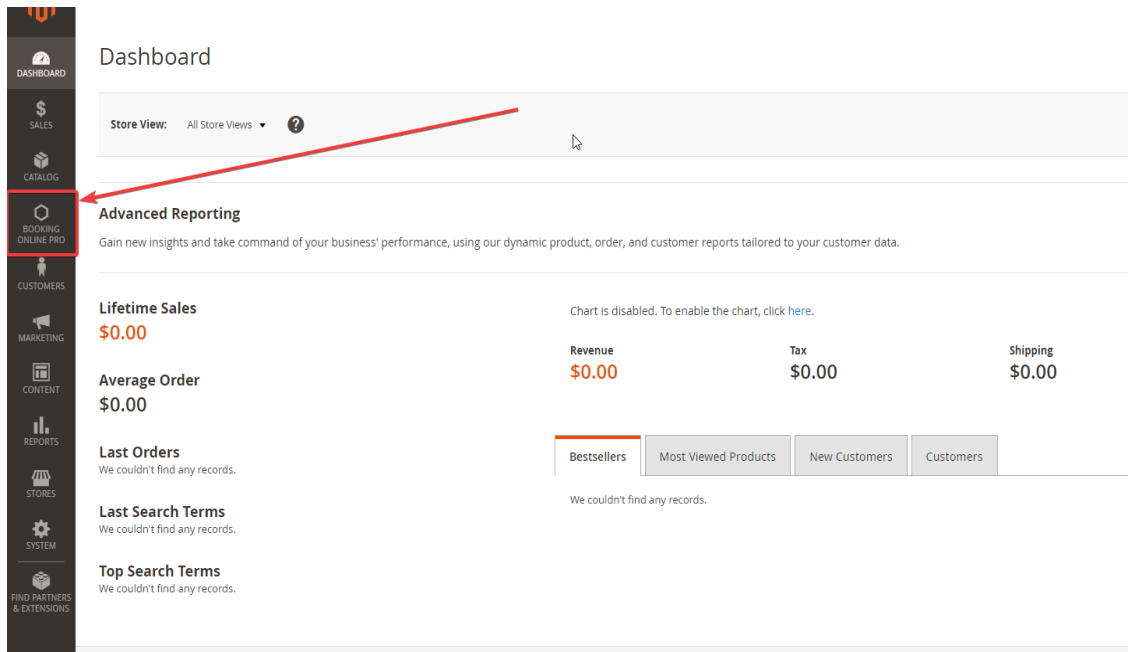

Step 2: Access ssh and go Magento root folder and run three command line to enable extension:

```

php bin/magento setup:static-content:deploy

Step 3 : Login to Magento Admin and clear cache , If you see Booking Online Menu , it mean Extension was installed successfully , you can start using our extensions

3. Backend Setting

Before add booking product and using extension you should go to booking setting to setting configuration for extension:

The screenshot displays the 'Booking Online Pro' settings interface. On the left, a sidebar menu lists various sections: DASHBOARD, SALES, CATALOG, BOOKING ONLINE PRO, CUSTOMERS, MARKETING, CONTENT, REPORTS, STORES, SYSTEM, and PARTNERS & EXTENSIONS. The 'Booking Setting' option is highlighted. The main content area shows the 'Active License Key' and 'General Settings' for the extension. The 'General Settings' section includes the following configuration options:

- Enable Booking online Extension** (store view): Yes
- Maximum Items** (store view): 5 (Maximum items that use can book)
- Full check out action page** (store view): checkout_index_index (Enter Full check out action page. For Example: checkout_index_index)
- User Address** (global): No (Use Address and Google Map)
- Show Calendar** (store view): Yes (Show/hide Calendar in Product page)
- Enable Shipping** (store view): No (enable/disable Shipping method in checkout page)
- Format Date** (store view): mm/dd/yyyy (Select format date for Date Ranger Picker)
- Time mode** (store view): 24 hours (Select Time Model 12/24)
- Start Day** (store view): Sunday (Start Day in Week)

A red box highlights the 'General Settings' section, and a red arrow points from the 'Booking Setting' menu item to this section.

You can also setting configuration for search page :

The screenshot shows the 'Search Settings' configuration page. A red arrow points from the 'Search Settings' header to the 'Enable Search Page' field. The page contains several settings with red annotations:

- Enable Search Page** (store view): Set to 'Yes'. Annotation: **Enable Search Page**. Description: Enable Booking Search page, if enable, Custom can find item on <https://example.com/bookingonline>.
- Show Link on top** (store view): Set to 'No'. Description: Show Link in Menu Top.
- Booking Categories ID** (store view): Set to '5'. Annotation: **Enter category id for Booking Items**. Description: Enter Category Id that use in Booking online page. Example : 2,3,4.
- Number Items** (store view): Set to '20'. Description: Enter Number Items in booking Search page.
- Max Price** (store view): Set to '1000'. Annotation: **Max price Client can filter in left sidebar**. Description: Enter Max Price.
