

The full extension user guide is available online:

<https://www.magetrend.com/user-guide/magento-2-out-of-stock-notification/>

1. To install extension via composer, simply run the following ssh commands:

```
composer config repositories.magetrend composer https://repo.magetrend.com;
```

```
composer require magetrend/stocknotification
```

```
php bin/magento setup:upgrade;
```

```
php bin/magento setup:di:compile;
```

```
php bin/magento setup:static-content:deploy;
```

During "composer require" command, you will be asked to enter the username and **password** of **repo.magetrend.com**. You can find those access in "[My Extensions](#)" page or if the extension was ordered by guest or from Magento Marketplace - [here](#).

The extension also can be installed manually, without composer. Information on how to install it without a composer is [here](#).

## Licensing

The extension is not working without a license key. If you don't have it or don't know yours, please follow article [Licensing](#).

To install a license key, go to your store admin panel and navigate to:

Stores > Configuration > Magetrend Extensions > Out of Stock Notification > Information & License

Enter the license key, and press the "Save Config" button.

**Note:** the paid extensions have two different licenses: production and development. Please use the same development license key for all your non-production setups.

If a license was installed successful, you should see a following view

## Information & License

**License Key**  
[global]

XXXX-XXXX-XXXX-XXXX-XX

If you don't know your license key, please follow this article  
<https://www.magetrend.com/user-guide/licensing/>

**License Status**    Active

**License Type**    Production
