

Shopreview Plugin

For Magento 2

Shopreview

Collect customer reviews with this complete store review extension. With the import and export function, you are always sure that the reviews remain in-house. Positive customer reviews are the best advertisement for your webshop and deliver direct 'Social proof' and thereby convince other people to also buy products in your Magento store. With the Shopreview extension, reviews remain in your possession and you can determine what you do with the reviews in the management, in addition, the purchase is an onetime amount without further monthly subscription costs.

Scalable: Create different forms

If you want to assess per store view for different store parts, it is possible to create multiple forms. This makes it possible to create a different form with different assessment points per store view. For these forms, it is again possible to create Widgets to implement them in for example footer and sidebar.

Full Control

It is easy to set whether it is possible for guests to write reviews and / or for reviews to be posted directly or to be moderated first. If enabled, it is easy to set to which e-mail address the notification should be sent with the notification that a new review is waiting for approval or rejection.

Export & Import Reviews

When you come from another review platform, it is easy to import those existing reviews into an existing form within the Shopreview extension. Per form, it is possible to make an export as CSV to which this CSV can be supplemented and imported. This way, the content is and remains in-house without being dependent on an external review platform.

Installation

Find the installation and configuration guides right here;

<https://www.magmodules.eu/help/magento2-shopreview.html>

Configuration

For more information on how to configure the plugin, please find the configuration guides below;
