

Thanks for buying the extension for Magento 1.x **Ajax Layered Navigation**.

READ THIS FIRST - VERY IMPORTANT!

Before installation:

- a. Make sure your catalog has filterable attributes, you can check that in the Magento admin panel: Catalog > Attributes > Manage attributes, check if at least one attribute has the option "Use in Layered Navigation" : "Filterable (with results)" or "Filterable (no results)"
- b. For a category to display the layered navigation block (a.k.a. filters or filters block) , a category has to be an "Anchor" category. This has to be enabled for each category. To change the "Anchor" option for a category, edit the category (Catalog > Manage Categories) , select a category from the categories tree on the left column, go to to the "Display Settings" tab, and change the value of "Is Anchor" to "Yes", then save.
- c. After editing an attribute or a category, clear your Magento cache and reindex Magento.
- d. Disable extensions that affect the layered navigation as they will probably conflict with the ajax price slider extension.

Installation Steps:

1. Drop the app-skin folders in your magento installation folder.
2. You should logout and login again to access the configuration section of the extension : System > Configuration > Ajax Layered Navigation > Settings
3. After that, do not forget to refresh your Magento cache. If any doubt or comment, please do not hesitate to contact us.
