

**Products by Quantity Range extension
installation guide**

Products by Quantity Range extension

The extension shows products which stock quantity value are between in a specified range. The module provides a widget for inserting the block anywhere in the frontend quickly.

The administrator can insert the widget in CMS Pages and Static Blocks, or anywhere use the Magento 2.0 Widgets menu.

The extension comes with five different default templates for showing products in the content area, or anywhere on the frontend of the store depends on the administrator choice. These five modes are displaying the products in grid or list, images and names only, names or images only mode.

The widget has plenty of options to set up before inserting, so it's easy to customize the appearance of the products. The administrator can configure to show or not the block widget title, and also customize title's text. There is the same option for the block's subtitle (short description) also.

The administrator can set to display the pager of the product list and the number of products per page. The customizable minimal and maximal stock quantity range determine which products will be displayed.

There are also options to set up the default sorting of the products (name, price, creation date) and the maximum number of items to display.

The extension supports configurable, grouped and bundle product types (besides simple, downloadable or virtual products) which have associated or attached simple products.

- The widget(s) can be placed anywhere easily on the store frontend in Magento 2.0.
- Five different default mode to show the list of the items.
- Custom block title and a short description(subtitle), and also the availability to show or not.
- Display pager or not and the number of products to show by page.
- Customizable minimal and maximal stock quantity limit range.
- Adjustable maximum items to display, sorting options by creation date, name and price in ascendant or descendant direction.
- Administrator able to set separately to display or not configurable, grouped and bundle products.
- Multistore support.
- Supported languages: English.

Individual module, i. e. it does not modify the standard Magento 2.0 files.

Support:

Magento Community Edition 2.1.x, 2.2.x

Installation

Important! Always install and test the extension in your development environment, and not on your live or production server.

1. Backup Your Data

Backup your store database and web directory.

2. Clear Cache and Cookies

Delete the store cache under var/cache and all cookies for your store domain.

3. Disable Compilation

Disable Compilation, if it's enabled.

4. Upload Files

Unzip extension contents on your computer and navigates inside the extracted folder. Create folder app/code on your web server if you don't have it already. Using your FTP client upload the content of the directory to your store root/app/code folder.

Important! If the module contents don't include the Me/Aos directory in the zip file, you must create root/app/code/Me/Aos folder and upload the extension here.

5. Enable extension

Please use the following commands in the /bin directory of your Magento 2.0 instance:

```
php magento module:enable Me_Aos
```

```
php magento setup:upgrade
```

One more time clear the cache under var/cache and var/page_cache login to Magento backend (admin panel).

Configuration

Login to Magento backend (admin panel). You can find the module configuration here: Stores / Configuration, in the left menu Magevolve Extensions / Products by Quantity Range.

Settings:

Basic

Enable Extension: Here you can enable the extension. If this value is no, all the widgets belong to this extension will not be displayed. So it's easy to turn off the displaying of the widgets in one place.
