

**Wish List Admin Email 2.0
extension installation guide**

Wish List Admin Email extension

The extension sends automatically email notification to the administrator when the customer adds a new product to the personal wish list.

The email contains the visitor name and also the visitor's email, so the web shop administrator can easily find the user in the admin panel.

The email also includes the newly added product details. In the extension's configuration section, the administrator can set to send only the newly added product detailed information in the notification, or the entire wish list highlighted (marked) with the recently added product.

The extension can be configured only for specified customer groups. The product prices include or exclude tax in the notification email. The price display depends on proper tax configuration of the store.

The module's configuration also allows setting custom email address (and separate bcc email address) for the notification.

The extension comes with a new email template which can be easily loaded and edited at the transactional emails section in the admin panel.

- Module enable / disable.
- Automatically sends an email notification when the customer adds a new product to the wish list.
- Show prices excluding or including tax based on store settings.
- Enable customer groups segmentation.
- Can be configured to send the whole wish list or only recently added product.
- Configurable email address and bcc email as well.
- Custom email template.
- Multistore support.
- Supported languages: English.

Individual module, i. e. it does not modify the standard Magento files.

Support:

Magento Community Edition 2.0.x, 2.1x

Magento Enterprise Edition 2.0.x, 2.1.x

Installation

Important! Always install and test the extension in your development environment, and not on your live or production server.

1. Backup Your Data

Backup your store database and web directory.

2. Clear Cache and Cookies

Delete the store cache under var/cache and all cookies for your store domain.

3. Disable Compilation

Disable Compilation, if it's enabled.

4. Upload Files

Unzip extension contents on your computer and navigate inside the extracted folder. Create folder app/code on your web server if you don't have it already. Using your FTP client upload the content of the directory to your store root/app/code/Me/Wlae folder.

5. Enable extension

Please use the following commands in the /bin directory of your Magento 2.0 instance:

```
php magento module:enable Me_Wlae
```

```
php magento setup:upgrade
```

One more time clear the cache under var/cache and var/page_cache login to Magento backend (admin panel).

Configuration

Login to Magento backend (admin panel). You can find the module configuration here: Stores / Configuration, in the left menu Magevolve Extensions / Wish List Admin Email.

Settings:

Basic

Enable Extension: Here you can enable the extension.

Enable Customer Segmentation: Please select yes, if you would like to set specified customer groups for notification.

Enabled Customer Groups (if Customer Segmentation enabled): Please select customer groups.

Email Options

Email Wish List Items: Please select to send only the recently added item, or the whole wish list. In the second choice, the newly added item will be marked.

Send Emails To: Please enter the email address where to send the notification.

Send BCC Emails To: Please type the bcc email address where to send the copy message.

Email Sender: Please select the email sender from store email addresses.

Email Template: Please choose the custom email template or use the default.

Troubleshooting

1. After the extension installation, I receive a 404 error in Stores / Configuration / Wish List Admin Email.

Flush the store cache, browser cookies, log out from backend and login back.

2. My configuration changes do not appear on the store.

Flush the store cache, clear your browser cache and domain cookies and refresh the page.

Extension license

The module license description included in the Terms and Conditions:
