3. [Configuration](#)
4. [KNET Payments in Frontend](#)
5. [KNET Payments in Backend](#)

## 1. How to Apply for KNET Payment Gateway Registration

You need to sign up with any of the member banks to use [KNET payment gateway](#) in your website. After successful signup, merchants have to go a certification process to ensure the successful integration of the gateway with the website. The certification process takes maximum 2 weeks of testing. Apart from this certification, merchants have to obtain a digital certificate from any authorities. After the certification, KNET notifies the acquiring bank with the result and the date from when merchant can start using KNET payment gateway.

## 2. Extension Installation

To install the KNET Payments extension in Magento 2 environment, the below technical requirements need to be fulfilled:

- **Secured web/application server:**  
The merchant must acquire a certificate from a certificate authority in order to do ecommerce transactions with KNET Payment Gateway.
- **Network and SSL:**  
The web server of Magento 2 store should have a valid SSL certificate in order to have KNET server receive the transactions. KNET is currently running with Verisign Extended Validation SSL.  
Valid SSL certificate issuers for KNET to accept the transaction:
  - [www.Verisign.com](http://www.Verisign.com)
  - [www.Thawte.com](http://www.Thawte.com)
  - [www.geotrusteurope.com](http://www.geotrusteurope.com)
  - [www.Equifax.com](http://www.Equifax.com)
  - [www.digicert.com](http://www.digicert.com)
  - [www.comodo.com](http://www.comodo.com)

KNET will not provide SSL certificate to merchants.

- **Security configuration:**  
The https port of the Magento 2 web server should be made accessible to the KNET Payment Gateway Server. KNET will only accept https communication between the KNET Payment Gateway (Port: 443) and a merchant website. This is because the authorization details sent to merchant's web server are sensitive details like password.
- **Extension Installation:**
  - Create a folder structure in Magento root as app/code/Meetanshi/Knet
  - Download and extract the zip folder and upload our extension files to the app/code/Meetanshi/Knet via FTP.
  - Login to your SSH and run below commands step by step:
    - `php bin/magento setup:upgrade`
    - For Magento version 2.0.x to 2.1.x - `php bin/magento setup:static-content:deploy`
    - For Magento version 2.2.x & above - `php bin/magento setup:static-content:deploy -f`
    - `php bin/magento cache:flush`

### 3. Configuration

For configuring the extension, login to Magento 2, move to **Sales → Payments Methods → KNET Payment** where you can find various settings to enable the extension.

- **Enabled:** Set “YES” to enable the payment method.
- **Title:** Set the title for the payment method to be displayed in the frontend.
- **Sandbox Mode:** Select YES to enable the sandbox mode for testing purpose.
- **Transportal ID:** Enter the transportal ID provided by KNET during registration.
- **Transportal Password:** Enter the transportal password provided by KNET during registration
- **Terminal Resource Key:** Enter the terminal resource key provided by KNET during registration
- **Payment Language:** Set language of the payment.
- **Auto Invoice:** Select YES to allow generating auto invoice for the orders paid using KNET.
- **Payment From Applicable Countries:** Select countries to allow using this payment method.
- **Sort Order:** Enter Sort Order of the payment method display in frontend.
