

# Restrict Fake Registration for Magento

## User Guide

### Table of Content

1. [Extension Installation](#)
2. [Configuration](#)
3. [Google reCAPTCHA Settings](#)
4. [Fake Registration Validation Message](#)

## 1. Extension Installation

- Upload or copy all folders in the zip package to your Magento root folder. It doesn't overwrite any existing files but just adds new files to the folder structure.
- Once done, log in your Magento admin panel, go to **System → Cache Management**, select all caches and refresh.
- Navigate to **System → Configuration**, if you can see the extension tab, it is installed properly.
- If you get Access denied error, you need to log out admin panel and log in again.

## 2. Configuration

For configuring the extension, login to Magento, move to **System → Configuration → Restrict Fake Registration** where you can find various settings to enable the extension.

- **Restrict Fake Registration:** Enable the Restrict Fake Registration extension.
- **Restricted Email Domains:** Input the Email domains (TLDs), separated by comma, to restrict fake registration.
- **First Name Character Limit:** Enter the maximum character limit for first name.
- **Last Name Character Limit:** Enter the maximum character limit for last name.

**Restrict Fake Registration** Save Config

**Configuration**

Restrict Fake Registration:  Enable Restrict Fake Registration extension from here

Restricted Email Domains:  Enter comma separated domains to restrict fake registration

▲ Enter comma separated Email domains to restrict fake registrations.

First Name Character Limit:  Enter maximum character limit for first name

▲ Specify maximum character limit of the first name to allow registration.

Last Name Character Limit:  Enter maximum character limit for last name

▲ Specify maximum character limit of the last name to allow registration.

### 3. Google reCAPTCHA Settings

To avoid spam and bots from registering to the store, you can enable [Google reCAPTCHA](#).

- **Google reCAPTCHA:** Enable Google reCAPTCHA to avoid registration from bots.
- **Site Key:** Enter the site key you got while registration with Google reCAPTCHA.

The screenshot shows the 'Google reCAPTCHA Settings' section in a Magento admin panel. It contains two main fields: 'Google reCAPTCHA' and 'Site Key'. The 'Google reCAPTCHA' field is a dropdown menu currently set to 'Enable'. The 'Site Key' field is an empty text input box. Below the 'Site Key' field, there is a small note: '▲ Register with [Google reCAPTCHA](#) to get your site key.' Two red callout boxes with arrows point to the 'Enable' dropdown and the 'Site Key' input field, providing instructions: 'Enable Google reCAPTCHA to avoid registration from bots' and 'Enter site key you got while registration with Google reCAPTCHA'.

▲ Register with [Google reCAPTCHA](#) to get your site key.

#### 4. Fake Registration Validation Message

Once the extension is configured successfully, when a fake user tries to register with the validated settings, a validation message is displayed on the frontend.

Also, the Google reCAPTCHA is enabled on the registration form for security from undefined bots as shown below.

Registration is restricted. Validation message to restrict fake registration
